

2022 SECRETARIAT REPORT ON RESEARCH AND STATISTICS

Introduction

The activities and information included in this report refer to the period between 1 October 2021 and 7 October 2022 (the Reporting Period)¹. All the fisheries statistics, biological statistics and compliance related information have been presented by the Secretariat to the SCRS Working Groups during intersessional and Species Groups meetings. After five years of continuous improvements, the Secretariat observed in the last three years (2019, 2020 and 2021) a slight regression in data completion quality. More datasets have only passed the SCRS filtering criteria after the corrections had been made by the Secretariat (errors mostly linked to incomplete forms and invalid use of ICCAT codes). In addition, many CPC submissions have not used the most recent ICCAT electronic forms (2022 version to report 2021 data). The Secretariat will keep working closely with CPCs' scientific correspondents to ameliorate these problems in the future. Regarding the activities conducted by the Secretariat in the most recent years, in addition to the normal activities developed on statistics, publications, data funds management and others, the Secretariat is dedicating substantial additional work related to stock assessment activities and the MSE processes, whether participating actively in the processes or coordinating and managing external support to the SCRS work. The year 2022 was even more difficult for the Secretariat than 2021, due to the increased number of SCRS (from 22 to 24) and Commission meetings (from 8 to 14). Such a high number of meetings greatly limited the capacity of the Secretariat, in addition to the fact that due to the pandemic most of these meetings were held online, which involves an additional workload in terms of associated logistics, preparatory work and online meeting management.

1. Statistical and biological information reporting status

ICCAT Circular # 0669 / 2022 of 3 February 2022 established the provisions for reporting fishery statistics and biological data to ICCAT. The receipt date of each email (with the respective files attached) was adopted as the official submission date of the Contracting, Cooperating Party, Entity or Fishing Entity (CPC). The deadlines to report information for the intersessional meetings (required data detailed in the respective species work plans) was established by default as 15 days ahead of the start of the meeting, and were as follows:

- Skipjack Data Preparatory Meeting: 21 February 2022
- Atlantic Swordfish Data Preparatory Meeting (including N-SWO MSE): 6 March 2022
- Eastern Atlantic and Mediterranean Bluefin Tuna Data Preparatory Meeting: 3 April 2022

The general deadline for reporting 2021 statistics (or any required revision to prior years) of all species and fisheries was 31 July 2022. A tolerance of 24 hours has been given to include all the time zones.

A total of 57 ICCAT CPCs [52 Contracting Parties (CP), plus 5 Cooperating non-Contracting Parties/Entities/Fishing Entities (NCC)] have reporting obligations to ICCAT. For statistical purposes, this corresponds to a total of 75 flag related CPCs (50 CP + 1 CP [15 EU Member States] + 1 CP [5 UK flag States] + 5 NCC) who have reported information to ICCAT in recent years. The term "flag CPC" was adopted here to refer to those 75 flags.

The Secretariat continues to use (since 2015) the SCRS filtering criteria (Filters 1 and 2, described in Addendum 2 to Appendix 8 of 2013 SCRS report (Anon., 2014), updated by the SCRS in 2017) to validate and accept statistical data received under official formats. The filtering criteria, embedded in the electronic forms since 2015, are always maintained up to date in the latest versions of the statistical forms (i.e., 2022 version).

¹ Only the statistical data received during the Reporting Period by the Secretariat in valid formats (version 2022 of the electronic forms, or special agreed formats) were considered in this report.

For 2021 data, Filter 1 was effectively applied and the results are presented in the SCRS Report Cards (**Tables 1, 2, 3, 4, and 5**, with a summary in **Figure 1**). The “orange” cells indicate the associated datasets that have not passed Filter 1. The “green” and “yellow” cells indicate the datasets that have passed Filter 1, and were reported before and after the deadline, respectively. Whenever possible, the Secretariat has corrected the rejected datasets and informed (or will do so shortly) the respective CPCs on the revisions needed. The updated datasets that arrived before 31 July are shown in “green”, and the ones arriving afterwards are shown in “yellow”. The information associated to the “orange” cells were provisionally integrated into the ICCAT database system (ICCAT-DB) and marked for revision. Filter 2 was also applied, and the results presented to the SCRS. Both filters were used on every Task 1 and Task 2 dataset received (scenario 2, methodology described in Palma and Gallego, 2015). The implementation of the SCRS filtering criteria to the remainder of the statistical and tagging forms will be progressively carried out in the following years, because it requires the definition of the filtering criteria for those forms, and that the Secretariat prepare in advance the corresponding databases and forms and develop the data integration tools.

About 95% of all the “ST” statistical forms (ST01, ST02, ST03, ..., ST10) received (a total of about 1,100 forms) during the Reporting Period were automatically processed, validated and stored, using the new JAVA “automated data processing framework” (nearly 100%, discounting the data arriving in special formats). The Secretariat has already enlarged the functionality of this framework to process the remainder of the statistical forms (ST07 through ST10) and has plans to include the automatic integration of the conventional tagging forms in the near future (advancements have been made to the tagging database redesign for both conventional and electronic tagging).

Fourteen flag CPCs have used older SCRS forms to report 2021 data. To facilitate the revision process, the Secretariat moved whenever possible the information received in 5 older versions (2017 to 2021) to the 2022 form versions and requested to the respective flag CPC a formal validation of the transformation. Given the increasing number of old versions of statistical forms used to report both new and historical data (~7% of a total of about 1,100 forms submitted during 2022), the Secretariat reminds CPCs of the Commission's requirement of using the MOST RECENT standard electronic forms adopted by the SCRS (part of the filtering criteria) for submitting both NEW and HISTORICAL data. Using historical forms obliges the Secretariat to move all the information of a given form to the most recent equivalent one, which poses an additional and unnecessary burden on the Secretariat. As explained in the past, the Secretariat does not have the means to maintain the code of the unattended data integration tools (import, validate, correct, integrate) developed to work with several historical versions (only the latest one has priority).

The overall reporting status for 2021 data (summarised in **Table 5** and **Figure 1**), shows that 71 of the 75 flag CPCs (95%) have reported fisheries and biological information: 60 flags with catches (80%): 1 without catches reported (2%); 10 flags with no fishing activity (13%). No information of any kind was received from 4 flag CPCs (5%) all over the Reporting Period: Angola, The Gambia, Grenada and Guinea Bissau.

1.1 Task 1

The two datasets of Task 1 statistics (T1FC fleet characteristics; T1NC nominal catches) are yearly based global information on (a) fishing capacity (using form ST01-T1FC), and (b) total catches by species (using form ST02-T1NC), with both forms being mandatory for all CPCs. The Secretariat reminds that for T1NC, the statistical sampling areas are now mandatory (maps: www.iccat.int/Data/ICCAT_maps.pdf). The old Task 1 areas without geographical delimitation still optional.

1.1.1 Fleet characteristics (T1FC)

The information requested in form ST01-T1FC has two sub-forms. Sub-form ST01A is used to compile information by individual vessel. Sub-form ST01B, is used to compile information by groups of vessels, but only for small scale vessels (length overall less than 20 meters) not included in ST01A. Only the fishing vessels actively fishing within a given calendar year should be reported in ST01-T1FC.

The structure of the ST01 form adopted in 2015, allows to collect more complete and detailed information on effective fishing capacity, fleet structure, and optionally yearly based and gear independent nominal fishing effort (fishing days). However, the “optional” condition of reporting the nominal fishing effort (for 2021 data, about 55% of the flag CPCs reported fishing days) makes it unfeasible to obtain overall effort

indicators and compromise possible estimates of total fishing capacity. Having the fishing days for each vessel in both Atlantic and Mediterranean regions would allow to effectively differentiate active from inactive vessels from all the authorised vessels to fish in the ICCAT Convention area in a given calendar year. Hence, the Secretariat reiterates once again the request to make this field mandatory aiming to improve the quality of T1FC data and its potential use in scientific studies.

The T1FC Report Card for 2021 is presented in **Table 1**. For the last eight years (2014 to 2021 data) T1FC has been requested on an individual vessel basis, in agreement with the ICCAT vessel record requirements of the Commission for the 11 vessel authorisation lists, which facilitates the cross-validation process. The Secretariat reminds that this information is also used by the Commission (fulfilling the requirements under Rec. 15-08, which collects previous year vessel activity under some ICCAT fisheries (BFT-E, Tropical species, and SWO-M).

The overall reporting ratio of ST01 for 2021 was 88% (66 flag CPCs) with 10 flag CPCs having late submissions and 12 flags with corrections to their data that may need future revisions. Nine flag CPCs (12%) have not yet reported this information.

The vessel sizes (LOA) ranged from 5 to 150 meters in 2021 data, including small scale vessels reported in sub-form ST01B by eleven flag CPCs (about 4,850 vessels). Near 2,290 vessels reported in T1FC were not found in the ICCAT vessel record database (with about 58,000 vessels registered). Some cases could be related to different vessel characteristics being reported in the T1FC and in the ICCAT vessel record. Solving these inconsistencies will require additional work by the Secretariat.

1.1.2 Nominal catch (T1NC)

Task 1 nominal catch data (T1NC) which contains landings and discards (dead and alive) by species, stock, gear, fleet, and year (all in live weight) is a “key” dataset used in all the stock assessments. Thus, a complete and timely available T1NC dataset is essential for the work of the SCRS and the Commission. The T1NC compiles (form ST02-T1NC) fishery statistics using two sub-forms. Sub-form ST02A, compiles positive catches (separating landings, dead discards, live discards, and live catches for farming facilities). Sub-form ST02B, compiles a “zero” catch matrix (major species/stock by gear) with positive fishing effort of active gears that have operated within the year. This approach, approved by the Commission (Res. 15-09), has greatly normalised and simplified the “zero” catch reporting obligation. Only one “zero” is now required per major species/stock and gear combination. The ST02B may require a revision in the future to include and remove additional species/stocks (requested by several flag CPCs).

The T1NC Report Card for 2021 is presented in **Table 2**. It shows the CPCs that have reported both positive catches and “zero” catches (excludes all the SCRS catch estimates). A summary of the “zero” catches reported by flag CPCs and major species/stock in sub-form ST02B, is presented in **Table 16**. All the T1NC datasets received from 70 flag CPCs (93%), including the 8 flag CPCs with late reports, were processed and presented to the SCRS. This includes some datasets corrected by the Secretariat (orange cells, marked for revision) associated to 9 flag CPCs. Five flag CPCs (7%) have not yet reported this information. The total 2021 T1NC nominal catches (~ 676,000 t) reported for all species is about 18% lower when compared with the average of the last five years (2016 to 2020: ~ 827,000 t).

1.2 Task 2

Task 2 statistics with catch-effort and size information are more detailed in terms of time (month) and area (1x1, 5x5, or sampling areas), and often reflect a partial coverage associated to the total production (T1NC). Task 2 information is the main source of data used by the SCRS in stock assessments and the Secretariat for estimation of important datasets, such as CATDIS, EFFDIS, CAS, and CAA by species (all used by the SCRS and the Commission). ICCAT CPCs must report three types of Task 2 datasets under their respective electronic forms:

1. T2CE (catch & effort): using form ST03-T2CE
2. T2SZ (size samples): using form ST04-T2SZ
3. T2CS (catch-at-size): using form ST05-T2CS (only for ALB, BFT, BET, YFT, SKJ, SWO)

Or alternatively, any of the special agreed formats agreed by the Secretariat and an ICCAT CPC.

There is also a special form (ST06-T2FM) used to report bluefin tuna caught by purse seiners and transferred to farming facilities in two important events: a) while caging; b) harvested after growing. These compiled datasets can be considered special types of Task 2 size information. However, this information is treated separately (due to the growth at the farms) and used in the stock assessment only after discounting the growth on the farms.

1.2.1 Catch and effort

The T2CE Report Card for 2021 is presented in **Table 3**. A total of 57 flag CPCs (76% reporting ratio), including 7 late-reporting flag CPCs, have reported T2CE. At least 18 flag CPCs (24%) have not yet properly submitted T2CE statistics for 2021.

All the T2CE information was reported by month and for the most part had the geographical resolution required by the SCRS (1x1 or better for surface fisheries, and 5x5 or better for longline fisheries). The number of datasets reported with the exact geographical location (Latitude/Longitude) continues to increase. The number of species reported in T2CE datasets has also increased lately, in particular for the pelagic shark species. For the most recent years, the trend of reporting more detailed and complete T2CE has continued. Since 2017, the T2CE datasets without effort information are not integrated into the ICCAT DB, and explicit requests for revisions are always made by the Secretariat to the corresponding flag CPCs. The Secretariat continues with a T2CE data recovery task, aiming to complete the gaps identified, and to replace “poor” datasets whenever possible, using the new levels of resolution required by the SCRS, such as monthly based datasets, spatial resolution of 1x1 squares for surface gears up to a maximum of 5x5 squares for longline gears. This ongoing task will continue indefinitely, and the Secretariat recommends more active collaboration of CPC scientists and Statistical Correspondents.

An important part of the Secretariat estimates (CATDIS and EFFDIS) depend on the quality of T2CE. However, some deficiencies persist in some datasets reported, the most problematic ones being:

1. Non-standard fishing effort types for certain gears (e.g.: for longline “hooks” is the standard)
2. Incomplete or partial species catch composition
3. Double counting of fishing effort, where same fishing effort is being reported several times in different forms for the same gear.

The Secretariat recalls that, as recommended by the SCRS, T2CE statistics should be in all cases reported with the most complete species catch composition. This rule will avoid duplication of the fishing effort for the same fleet/gear/year combination, in cases where each species is reported in individual ST03 forms with incompatible stratifications.

1.2.2 Size information

The T2SZ Report Card for 2021 is presented in **Table 4**. This Report Card also contains the datasets of T2CS (catch at size flag CPC estimates, for the six mandatory species) and size information T2SZ. It does not contain the bluefin tuna size samples arriving in form ST06-T2FM, or the bluefin tuna stereoscopic camera measurements. The inclusion of these two datasets into the T2SZ Report Card is performed manually after inventorying and checking all the datasets reported.

A total of 48 flag CPCs (64%), including 3 late-reporting flag CPCs and 5 with corrections to their data, have reported T2SZ. At least 27 flag CPCs (36%) have not yet submitted in good conditions T2SZ information for 2021.

Since 2017, the SCRS requires that all the T2SZ/T2CS datasets be reported by month, and with the highest geographical stratification possible (1x1, 5x5, 5x10, and 10x10 grids only), maintaining the ICCAT Sampling Areas for biological port sampling. All the size datasets for 2021 arrived by month. The use of smaller geographical grids (1x1, and 5x5) has also increased slightly. The size/weight class bins reported for 2021 have followed the SCRS recommendation on size structures (1, 2, and 5 cm) and weight structures (1 kg). As in years prior to 2021, some errors were identified in the units of the size/weight class bins (e.g. millimeters reported as centimeters) within 2021 size datasets. These datasets were tagged for posterior revisions.

Following Resolution 11-14 on the standardized presentation of scientific information, the SCRS developed the Standard Catalogues on data availability for a period of years, for all the major species and stocks. All the catalogues (28 tables) are presented in **Appendix 1**. These catalogues show the information for a “30 year” period (1992-2021), grouped by flag/gear group combinations, in terms of Task 1 nominal catches (ranked by importance in descending order), and the availability of Task 2 data (catch and effort, size sampling, and catch-at-size) by year. This instrument, which summarises large amounts of information per species/stock, shows the level of data completeness/availability, and the data gaps, for the most important fisheries. The catalogues of **Appendix 1** are provided for the ten major tuna and billfish species and three main sharks stocks only. The catalogues for the main small tuna species, usually prepared for the Small Tunas Species Group intersessional meetings only, were also updated for the SCRS. Following a 2020 recommendation of the SCRS, the Secretariat has published since 2021 the two SCRS catalogues on the ICCAT website (<https://www.iccat.int/en/accessingdb.html>) at the beginning of following year (with information submitted until the end of the annual meeting of the Commission).

The SCRS scorecard on Task 1/2 data availability is presented in **Table 6**, using the methodology adopted by the SCRS in 2019 (Palma *et al.*, 2019). It has the format adopted by the WGSAM (exception: last column with the relative score changes of two consecutive periods of 30 years: 1992-2021 versus 1991-2020) and already contains all the valid 2021 data received during the Reporting Period. Two indicators arise from the scorecard results: a) A general increase of all the scores as we reduce the time-scale scores from 30 to 10 years-based periods; b) Overall, the scores coincide with how the SCRS categorises each species/stock in terms of fisheries data availability (data-poor/data-rich concepts).

1.3 Tagging

1.3.1 Electronic tags

The laboratories conducting tagging campaigns with electronic tags (pop-up, archival, etc.) in the Convention area have informed the Secretariat of 379 releases and 38 recoveries made during the Reporting Period.

During this year, the development of an electronic tagging management system (ETAGS) has begun with the main goal of integrating in a centralized relational database all the information obtained from electronics tags and metadata. Given its complexity (combination of various technologies, large amounts of data to inventory, recover and treat, etc.) this project was planned for at least three phases.

Phase one has already been developed and its main objectives have been the inventory of data, the creation of the loading files and the installation of the database. The second phase will address the work of consolidating metadata and loading the data into the system.

A dashboard was created for the AOTTP project in order to view a general summary of the project statistics for the electronics tags implemented and is continuing to be improved.

1.3.2 Conventional tags

In relation to conventional tags, several Contracting Parties have reported to ICCAT a total of 9023 released fish and 554 recoveries (**Table 7**) during the Reporting Period.

As in previous years, the Secretariat provided conventional tags for tagging experiments to the ICCAT scientific community (individual scientists or research institutions). During the Reporting Period, the Secretariat distributed 4,255 conventional tags, primarily under the tagging projects of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP) and to various scientific institutions (**Table 8**).

The Secretariat has ongoing several projects such as the conventional tagging work on the database merge process (ICCAT, AOTTP, and GBYP), the integration of pending datasets received by ICCAT (e.g., some USA past submissions mostly with revisions), recovery of the shark species sex information, and other ongoing revisions and quality control on all tagging datasets, all aiming to increase the quality of the conventional tagging information managed by ICCAT. In addition, some dashboards and map viewer prototypes have been presented to various intersessional species groups meetings, with the aim to examine dynamically and interactively the conventional tagging data.

1.3.3 Tagging lottery

Due to the COVID-19 pandemic, the tagging lottery was cancelled in 2020, and 2021. The Secretariat has planned to include the recoveries from 2020, 2021 and 2022 in a unique lottery draw during the SCRS annual meeting.

1.4 Bycatch

The cumulative information on CPCs observer program design is included in **Appendix 3**. CPCs that reported ST09 data are listed in **Appendix 4**. Data was processed from 34 CPCs (excluding the empty submissions and those still requiring revision).

Table 9 provides a summary of ST09-DomObPrg data reported for the 2020 by discard fate and species group including sharks, sea turtles and seabirds. **Table 10** contains T1NC data for bycatch species for the reporting period.

1.4.1 Sharks

The shark data submitted through forms ST09 (Domestic Observer data) and ST02 (Task 1 nominal catches) in the reporting period are summarized in **Tables 9** and **10**, respectively.

1.4.2 Sea turtles

A summary of sea turtles information submitted for the reporting period in ST09 forms is provided in **Table 11**. The Secretariat received much of the bycatch information from submitted ST09-DomObPrg forms.

1.4.3 Seabirds

A summary of the information submitted on ST09 forms for seabirds is provided in **Table 12**.

1.4.4 Marine mammals

A summary of the information submitted on ST09 for marine mammals is provided in **Table 13**.

2. Data recovery and improvement

2.1 Revisions and updates

By default, historical revisions cover the years not covered by the SCRS “3 +1 revision rule”, where the last three years already reported officially to ICCAT plus the new year, are considered preliminary data and can be freely revised by CPCs. For 2021 data, all years before 2018 require a scientific document explaining the revision.

Several CPCs have submitted historical revisions to T1NC for tuna and tuna-like species, sharks and other bycatch species. Part of those revisions (BFT, SKJ, BET, YFT, and SWO) were made during the 2022 ICCAT intersessional data preparatory meetings. Some gaps were also completed and a few series with unclassified gears were also discriminated. Many CPC scientists were involved with the Secretariat in these revisions. This joint effort has greatly contributed to the T1NC improvements of these species, and this type of joint work should be recommended to the other ICCAT species groups. All the T1NC updates (excluding the “faux poissons” estimates made during the 2022 Skipjack Data Preparatory Meeting, using the methodology presented in document SCRS/2022/038) are summarised in **Table 14**, which contains all the revisions with the supporting SCRS documents and already adopted by the respective species groups.

There are however, some official T1NC datasets (**Table 15**) reported for years before 2018, without a scientific document or with a scientific document pending to be approved. These catch series require a SCRS decision. For the period 2017-2019, the Secretariat has some doubts on how to treat several catch series. The catches reported by Angola (2018) on longline and purse seine foreign fleets should have been presumably reported by those CPCs to ICCAT. For Gibraltar who reported catches of bluefin for 2015 to 2019 for the first time, the Secretariat requested additional information in relation to those catches (recreational fleet, catches retained and/or released, etc.) and is awaiting an official response. The Gibraltar

catches were preliminary (pending confirmation) adopted intersessionally by the Bluefin Tuna Species Group.

In follow-up to a 2018 Commission request to include in the T2CE datasets of the PS tropical fleets reported to ICCAT the effort unit “fishing operations/sets” per fishing mode (FAD/free school), which includes revisions to the existing T2CE datasets back to 1991, very minor improvements were made. No historical revisions were presented (the existing one was sent by EU-France in 2021), and for 2021 data only Belize, Curaçao, EU-España, and EU-France, reported T2CE with the number of sets. **Table 17** presents the historical T2CE datasets updated and adopted by the respective species groups (already integrated into the ICCAT DB) together with some remarks on the status. The USA revision (1986-2009) was a simple update aiming to harmonize the T2CE series (by month and 5x5 squares) and include the shark species in the species catch composition.

The Secretariat has also received some historical revisions for T2SZ. **Table 18** presents the historical T2SZ datasets reported and adopted by the respective species groups (already integrated into the ICCAT-DB).

2.2 Additional by-catch information

The seabird mitigation measures, compiled in the past using forms CP44 and ST011, are now integrated in the new ST09 form. The use of seabird mitigation measures was reported by 31 CPCs on ST09 forms in the reporting period.

3. ICCAT databases

The ICCAT database information system (ICCAT-DB) is a relational database management system (RDBMS servers: MS-SQL 2016 as the main server; MariaDB 10.4 for the IOMS system; PostgreSQL 13.4 for tagging) with about 45 databases built to manage all the structured information received by the Secretariat. It has various frontend/backend tools including, client applications developed mostly with Java technologies, SQL scripts, and some VBA tools (to be deprecated by the new applications under development). These tools are used to interact with the information (validation, transformation, processing, statistical analysis, data mining, standard outputs, etc.) and for data dissemination (web, ICCAT publications, meetings data provision, etc.).

In addition to the statistical and scientific information managed, the ICCAT DB system also manages a large portion of the information associated with the Commission’s compliance requirements. Since 2009, the workload of compliance-related information, mainly in response to the increase of regulatory measures has steadily increased the database management and related tasks (control, verification, storage and backup).

The Secretariat has through continuous development the ICCAT Integrated Online Management System (IOMS), aimed to manage online all the ICCAT data requirements. It is a long-term project intended to replace entirely the current ICCAT data reporting and management system. Three senior software developer experts (two within the ICCAT staff, and a third financed by the European Union complementary contribution) are working full time on the IOMS project, with the supervision and partial contribution to the development made by the Statistical Department of the Secretariat. For 2022/2023, the European Union (EU) has also granted (Project ref: 101058273 - EU-ICCAT-IOMS2021) a complementary contribution with an extraordinary budget for 1 year aiming to develop the IOMS vessel record module with the integration of the FLUX-TL system (details in the 2022 WG-ORT intersessional meeting [report](#)) for managing EU vessels (and potentially other ICCAT CPC vessels) in a more efficient way. At the 2022 WG-ORT intersessional meeting, the WG-ORT acknowledged the outcome of the first experimental (2021) and, as requested by the Commission at its 2021 Annual Meeting, recommended its official use to manage the ICCAT CPC Annual Reports (Part I/Annex 1 and Part II/Section 3) from 2022 onwards. During all the process the Secretariat has supported the ICCAT CPC officers in the completion of the 2022 annual reports.

In 2021 the Secretariat refined the databases to store information related to tropical support vessels, FAD deployments, and port sampling for tropical tunas, reported using forms ST07, ST08 and ST09, respectively. It has ongoing the redesign of four additional databases (Task 1, Task 2, Vessels, and, Tagging) aimed to be integrated into the IOMS project. The full ICCAT DB documentation, composed of several parts

(database reference manuals, user guides, “javadoc” for JAVA tools documentation, special articles, etc.) has been undergoing a merging process with the documentation related to IOMS implementation. Both will share the same databases, which will allow the elimination of redundant documentation. This ongoing work is being continuously merged and updated in parallel with the improvements made to the ICCAT DB and the progress of the IOMS.

The exceptional circumstances of 2020 and 2021 obliged the Secretariat to delay or postpone several projects. The most important ones were: the replacement of the stand-alone MS-ACCESS databases with Task 2 data (T2CE: “t2ce.mdb”, T2SZ/CS: “t2sz.mdb”) by SQLite databases; the “ICCAT forms” online Task 1/2 validation prototype; delay of the GIS project (aimed at geo-referencing all the ICCAT datasets, and to create a “marine-rich” PostGIS server); delay of the conventional/electronic tagging work (database redesign, automatic data integration tools, sex recoveries by individuals, etc.) and on the new “Biological Sampling” database aimed to handle all the large spectrum of biological data (ageing, maturity, stomach content, hard parts, etc.) obtained under ICCAT financed projects. The Secretariat has planned (see section 11) to recover all these projects.

Two of the above delayed projects have already started in 2021 and are now under heavy development. The first one is the ETAGS database system aimed to manage all the ICCAT electronic tagging information (data and metadata) for which several applications and analytical tools were planned. This project (with at least three development phases), co-financial by the ICCAT Atlantic-Wide Research Programme for Bluefin Tuna (GBYP), has now finished Phase 1 development (report in preparation: “GBYP_FINAL_REPORTS-ETAGS-Phase1-Lam.doc”) and will start Phase 2 in the short term. The second one, is the new “Biological Sampling” database (BIOSAMP) aimed to handle all the large spectrum of biological data (ageing, maturity, stomach content, hard parts, etc.) obtained under ICCAT financed projects. Several ICCAT datasets with this type of information obtained from various ICCAT research programmes (GBYP, AOTTP, SMTYP, SWOYP, etc.) are now being compiled, cleaned and afterwards normalized (transformed in harmonized structures with ICCAT existing or new codes) to be used in the design of the relational database model. This project, planned for the mid/long term, will be carried out fully in-house and will evolve depending on the time availability of the Secretariat database experts.

3.1 Statistics

3.1.1 Task 1 and Task 2

All the electronic forms used to collect Task 1 and Task 2 data (ST01-T1FC, ST01-T1NC, ST03-T2CE, ST04-T2SZ, ST05-CAS and ST06-T2FM) were updated to version “2022a” to incorporate the required changes of the SCRS (codes, structures, filtering criteria, etc.). The respective databases were updated accordingly. The Secretariat completed the automatic data integration of the information received in forms ST07, ST08, ST09 and ST10, and improved the automation processes to handle Task 1 and Task 2 forms. The Secretariat is also planning to develop similar automatic data integration tools for the conventional tagging forms TG01, TG02, and TG03. Extending this automatic integration framework for all the “ST” and “TG” forms will occur progressively (2023 and beyond) due to its complexity.

3.1.2 Catch distribution (CATDIS)

The CATDIS (catch distribution: estimation of T1NC for the nine major tuna and tuna like species of ICCAT, stratified by year, flag, fleet, gear, fishing mode, catch type, trimester, and 5x5 degree squares) is one of the most used ICCAT catch estimates, with a particular focus on the latest stock assessments of ICCAT using integrated stock synthesis models (SS3, Maunder and Punt, 2013). As approved by the SCRS in 2021 (see 2021 SC-STAT report), the Secretariat has updated the CATDIS from 1950 to 2020 according to the plan established:

1. Update the CATDIS (1950-2020) in December/2021 using the most recent statistics approved by the SCRS/Commission and publish the Statistical Bulletin Vol. 47 in January 2022. Extraordinarily, the Statistical Bulletin Vol. 47 to be published on January/2022 will have merged two CATDIS estimates (1st: 1950-2019; 2nd: 1950-2020).

2. The following volumes will return to the normal publication schedule in January each year (Jan/2023: Vol 48 with 1950-2021 series; Jan/2024: Vol 49 with 1950-2022 series, ...).

At the end of 2022, the Secretariat will update the CATDIS for 1950-2021 with the latest Task 1 and Task 2 datasets adopted by the SCRS and publish it in January 2023 (WEB and Statistical Bulletin Vol. 48). As expected, this approach had greatly benefited the 2022 intersessional work of the species groups and the SCRS.

Once again, the CATDIS has not included the estimates of four additional species: spearfish (SPF), blue shark (BSH), shortfin mako (SMA) and porbeagle (POR), due to the lack of sufficient information in T2CE for these four species (**Appendix 1**). However, some progress has been made on some data recoveries (e.g. the T2CE LL series of USA complemented now with sharks in the species catch composition), and new attempts should be made in the near future.

3.1.3 Catch at size/Catch at age

The catch-at-size (CAS) database is complete and functional, with an active connection between the size data and the substitution tables used for the CAS estimates. This year, the Secretariat has made a full update to the CAS estimates of skipjack tuna (1969 to 2020) and a partial update to the eastern bluefin tuna stock (1950-2020). The catch-at-age matrices (CAA) were obtained by the species groups using various slicing methods on the CAS final matrices.

3.1.4 FAD forms

In 2014, an electronic form (ST08-FadsDep) was created to collect information on the number of FADs deployed according to Rec. 13-01. This form has been revised several times and in 2018 the SCRS approved a new version addressing the main concerns raised by CPCs. In addition to the information provided on the ST08 forms, CPCs are also requested to submit FAD Management Plans according to Rec. 16-01, Rec. 19-02, and Rec. 21-01. Countries fishing for tropical tunas that have submitted information about their FAD fisheries and their FAD Management Plans, as well the ST08-FADsDep data in 2022 are summarized in **Appendix 2**.

3.2 Compliance

In recent years, several compliance-related measures adopted by the Commission include several reporting requirements of various kinds on Contracting Parties. The Secretariat maintains databases for these sets of information separately from the traditional fishery statistics (Tasks 1 and 2). Since 2011, following the Commission's adoption of the Confidentiality Data Policy, the Secretariat has provided compliance-related information to the SCRS to fill gaps, complement or cross-check fishery statistics. This section of the report includes the available data that have been summarized for the SCRS in 2022.

3.2.1 ICCAT Vessel record

The Secretariat maintains the ICCAT Record of Vessels database in accordance with Recs. 21-14, 16-05, 21-04, 16-07, 21-15, 17-02, 17-03, 21-01, 21-06 and 21-08). The Record comprises a total of 11 vessel lists. Since 2015, the ICCAT vessel record database is synchronised daily with the t-RFMOs Consolidated List of Authorized Vessels (CLAV) and the electronic Bluefin Catch Documentation Program (e-BCD). In coordination with CPCs, the Secretariat also carries out continuous revision and updates of the ICCAT vessel record database, also covering the elimination of vessel duplicates. The Secretariat is currently working on an online module for reporting this information as part of the IOMS project (see sections 3 and 11 of this report).

3.2.2 Bluefin tuna fisheries

Recommendations 21-08 and 21-07 establish several reporting requirements for CPCs fishing and/or farming bluefin tuna, including:

- List of vessels authorized to catch eastern bluefin (paras 48 and 49 of Rec. 21-08)

- List of other bluefin tuna vessels authorized to operate in the eastern bluefin tuna fishery (paras 48 and 49 of Rec. 21-08)
- Record of Joint Fishing Operations (paras 70-73 of Rec. 21-08)
- Detailed information on bluefin tuna catches in the eastern Atlantic and the Mediterranean in the preceding fishing year (para 67 of Rec. 21-08)
- Weekly eastern bluefin tuna catch reports by vessel and traps (para 86 of Rec. 21-08)
- Monthly western bluefin tuna catch reports (para 24 of Rec. 17-06)
- VMS messages (para 3 of Rec. 21-16 and para 218 of Rec. 21-08)
- List of bluefin tuna traps (paras 55-56 of Rec. 21-08)
- Bluefin tuna farming facilities (para 9b) of Rec. 21-08)
- Bluefin tuna farming reports (para 5 of Rec. 21-08)
- The use of stereoscopic cameras systems in the context of caging operations (para 162 and Annex 9, Rec. 21-08)
- Carry over of caged bluefin tuna (para 199 of Rec 21-08))
- Bluefin tuna caging declarations (para 168 of Rec. 21-08)
- List of ports in which vessels are authorized to land and/or tranship eastern bluefin tuna (paras 80-84 of Rec. 21-08)
- Data and information collected under each CPCs domestic observer programme (para 83 of Rec. 21-08)

3.2.3 VMS messages

The VMS information received under Rec. 21-08 consists of vessel ID (name, flag, radio call sign) and a position every hour. This information can, in theory, be used to infer fishing effort distribution and intensity. **Figure 2** shows the number of messages received in each 1° by 1°-degree rectangle during the Reporting Period. The plot represents only the Mediterranean Sea VMS messages that originated at sea.

3.2.4 Bluefin Catch Document (BCD) and electronic BCD

In compliance with Rec. 18-13, the Secretariat receives paper copies of bluefin tuna catch documents and re-export certificates that are intended to track bluefin tuna from the catch location to the market. Very few paper copies are received now, as the use of the electronic system (eBCD system) became mandatory on 1 May 2016. Since 2016 the Secretariat has continued to work with the eBCD Technical Working Group on further developments and support for the eBCD system. **Table 19** summarizes the BCD / eBCD catches (weight and number) currently available as of 7 October 2022.

3.2.5 Bluefin catch reports

Under Recs. 17-06 and 21-08, bluefin catch reports are sent to the Secretariat. **Tables 20** and **21** summarize the information available from the monthly (West) and weekly (East) catch reports (as of 7 October 2022), respectively.

3.2.6 Caging declarations

Caging declarations are submitted by farming Contracting Parties in compliance with Recs. 21-08. The caged amounts reported by different fleets and introduced into cages are shown in **Table 22**. The data shown represent data submitted up to 7 October 2022. Recommendation 18-13 also requires CPCs to submit the amounts remaining in cages from the previous year, and Recommendation 21-08 requires a summary report of amounts farmed, as well as quantities marketed, mortalities, and estimated growth.

3.2.7 Statistical Document Programme

Recs. 01-21 and 01-22 track international trade of certain types of fish products of bigeye and swordfish, under the ICCAT statistical document programme. **Table 23** summarises the number of biannual reports (SD: statistical documents; RC: re-export certificates) received from ICCAT CPCs during the Reporting Period. **Tables 24** and **Table 25** compare (swordfish and bigeye, respectively) for the period 2013 to 2022 (2022 only first semester) current Task 1 nominal catch against trade statistics (SDs and RCs, in product weight) received during the Reporting Period.

3.2.8 Transhipments

Rec. 21-15 established a programme to monitor at-sea transhipments by large-scale longliners. The amounts transhipped are reported in **Table 26**. Note that, there are many product types for which there are no conversion factors to a common weight unit.

3.2.9 Bluefin Tuna Regional Observer Programme (ROP-BFT)

The datasets from this programme have been made available by the implementing consortium to the Bluefin Tuna Species Group. Given the complexity of the database, such datasets are provided on request.

3.2.10 Bluefin tuna farming operations

A new database integrating farming size at caging and harvesting operations and auxiliary information has been developed with the collaboration of the GBYP to address research on bluefin tuna growth during caging. This database is currently being used to evaluate the maximum potential growth of bluefin tuna in farming operations following the request from the Commission in 2018.

3.3 FAD management plans

The *Recommendation by ICCAT on a Multi-Annual Conservation and Management Programme for Tropical Tunas* (Recs. 21-01) requires that each year by 31 January, CPCs with purse seine and baitboat vessels fishing for bigeye, yellowfin, and skipjack tunas in association with objects that could affect fish aggregation, including FADs, shall submit Management Plans to the Executive Secretary for the use of such aggregating devices by vessels flying their flag as well as information on FADs deployed and utilization during the previous year (ST08-FADsDep). The elaboration of the plan in Rec. 21-01 Annex 6 provides an extensive list of criteria that must be included in the Plan.

In 2022, 16 CPCs provided Tropical tuna fishing management plans, of which 2 also provided FAD management plans (**Appendix 2, Table 1**). ST08-FadsDep forms were received from 18 CPCs. Of these, six reported not using or deploying FADs. Following the request from the 2021 Commission Panel 1 intersessional meeting, historical data on FADs deployments were provided by 1 CPC in 2022 using the ST08 eform (**Appendix 2, Table 2**).

4. Work in support of the SCRS Intersessional Meetings

The main task of the Secretariat is to provide full support for all intersessional and annual meetings of the SCRS, including provision of the fisheries statistic data (Task 1, 2 and 3) and auxiliary data as requested by the Working Groups. The Secretariat also provides scientific support in collaboration with scientists and modelers for all the assessment methods, normally following an intersessional work plan approved by the subcommittees, species groups and/or working groups. During the meetings the Secretariat also collaborates with the compilation and integration of results, creating Status and Kobe plots, projections, auxiliary analysis and the backup of all analyses and main results in support of the management advice provided by the SCRS. Finally, in collaboration with Rapporteurs, the Secretariat provides support for research work plans, Calls for tender and other activities with the aim of making the best use of the available funds for science and data collection.

Since the last provision of advice by the SCRS in September 2021, the Secretariat provided support to a total 39 SCRS and COM/SCRS online and in-person meetings:

1. North-eastern Atlantic porbeagle data compilation workshop aiming 2022 ICCAT-ICES stock assessment, November 29 – December 3, 2021.
2. Meeting of the Online Reporting Technology Working Group (IOMS), February 7 – 8, 2022.
3. Meeting of the Mediterranean Albacore Working Group, February 9 - 10, 2022.
4. Skipjack Data Preparatory Meeting, February 21 – 25, 2022.
5. 2022 Ambassadors Webinars on Bluefin Tuna MSE, February 22 - 24, 2022.
6. First Meeting of the Electronic Monitoring Systems (EMS) Working Group, February 28, 2022.
7. Intersessional Meeting of Panel 2 (including BFT MSE), March 1 – 3, 2022.

8. Atlantic Swordfish Data Preparatory Meeting (including N-SWO MSE), March 21 – April 1, 2022.
9. Meeting of the Ad Hoc Working Group on Catch Documentation Scheme (CDS), April 4 - 5, 2022.
10. Meeting of the eBCD Technical Working Group (TWG), April 6 – 7, 2022.
11. Eastern Atlantic and Mediterranean Bluefin Tuna Data Preparatory Meeting, April 18 – 26, 2022.
12. North-eastern Atlantic Porbeagle ICCAT-ICES Stock Assessment Benchmark Meeting, April 29, 2022.
13. Meeting of the BFT Technical Sub-Group on MSE, May 3 – 6, 2022.
14. Second Intersessional Meeting of Panel 2 on Bluefin Tuna MSE, May 9 – 10, 2022.
15. Intersessional Meeting of the Sharks Species Group, May 16 – 18, 2022.
16. Meeting of the Tropical Tunas Technical Sub-Group on MSE, May 19 – 20, 2022.
17. Skipjack Stock Assessment Meeting, May 23 -27, 2022.
18. Meeting of the Subcommittee on Ecosystems, May 31 – June 3, 2022.
19. Meeting of the Working Group on Stock Assessment Methods (WGSAM), May 31 – June 3, 2022.
20. Second Meeting of the Electronic Monitoring Systems (EMS) Working Group, June 6 – 7, 2022.
21. ICCAT/ICES North-eastern Porbeagle Stock Assessment Meeting Lisbon, Portugal June 15 – 17, 2022.
22. Atlantic Swordfish Stock Assessment Meeting, June 20 – 28, 2022.
23. Intersessional Meeting of Panel 1, Ponta Delgada, Azores, June 28 – 30, 2022.
24. Eastern Atlantic and Mediterranean Bluefin Tuna Stock Assessment Meeting, Madrid, Spain July 4 – 9, 2022.
25. Third Intersessional Meeting of Panel 2 on BFT MSE, July 14, 2022.
26. Second Intersessional Meeting of the BFT Technical Sub-Group on MSE, September 5 – 9, 2022.
27. SCRS Species Group Meetings Madrid, September 19 -24, 2022.
28. SCRS Plenary meeting, Madrid, September 26-30, 2022

In addition to the support provided to working groups and subcommittees, the Secretariat also produced a total of 25 SCRS documents and 10 presentations. The list of these documents is compiled in **Appendix 5**.

5. Information and technology

The most significant improvements to the Secretariat's Information Technology (IT) are described below.

5.1 Improvement of the backup service with disaster recovery for virtual servers and user computers

The local backup and DR service of the Secretariat's virtual machines have been improved. There has been a change of supplier, providing better results at a technical level and in terms of confidence.

5.2 Improvement of the use of server and computer management software

It has been migrated from an on-site version to a cloud version, and the inconveniences caused by the previous version have been avoided.

5.3 Conducting a Security Audit of the ICCAT website and the Secretariat office

Another black box audit of the ICCAT Web server, as well as of the Secretariat's external connections, has been carried out. Work will begin shortly to resolve the vulnerabilities found.

5.4 Cybersecurity and regulatory compliance consultation services – SGSI implementation

The User Security Manual and the Security Policy have been presented to the Secretariat staff. Once some questions about these documents have been modified, they will be published and gradually complied with. Additional documents that are part of the SGSI are being worked on for presentation to the Secretariat.

5.5 Improvement of the 'Passwordless' access solution

The configuration of this security solution did not go well, and another provider (distributor of the product for Spain) has been chosen. These tests have been positive, although the process has not been completed.

It will be gradually applied to all users. An update to the Fortinet VPN client will be required to fully implement this solution. It will allow access to the user's computer once a VPN session has been performed.

5.6 Purchase of cyber insurance

Cyber insurance has been purchased to mitigate the costs of a cyber-attack.

5.7 Contracting of NextCloud service

A NextCloud service has been contracted with two objectives: to allow exchange of information with third parties and to migrate the current OwnCloud solution for ICCAT meetings. Initial testing will begin shortly.

5.8 Migration of telephone landlines and fax

The provider of the telephone landlines and virtual fax has been changed, because Telefónica is eliminating copper switchboards. Telefónica's costs were very high, and Voz.com was chosen based on the experience of the provider Abetelnet, which carries out the maintenance of the Secretariat's landline telephone switchboard, with a significant cost reduction.

5.9 New computers for staff

Eight laptops and one desktop have been purchased, including for the new recruits to the Secretariat, i.e., Beatriz Motos and Dawn Baity.

5.10 Servers fortification

We are working on fortifying the virtual servers of the ICCAT Secretariat while, in parallel, implementing the remainder of the security work planned.

5.11 Correcting SOC Security Alerts

We are working to resolve the alerts of potential security risks generated by the SOC associated with the public IP addresses of the Secretariat's IT infrastructure, the webserver and the BitDefender Security software console notices.

5.12 Integration of virtual machines of the VMS system with the virtualization of the Secretariat

The CLS provider has updated its virtual machines, and we have integrated them into the virtualization of the Secretariat. The pursued aim is to integrate and solidify the server infrastructure.

6. Publications

6.1 ICCAT series of periodic publications

For the current year, the Secretariat has continued the series of periodic publications developed throughout the history of ICCAT. **Table 27** shows the volumes of these series that were published in 2022. Due to the request from the Commission to reduce costs, since 2017 all ICCAT periodic publications are only published in electronic format and are all available for download on the ICCAT publications webpage.

All volumes of the Biennial Report have been published, including Volume 4 which was published for the first time in 2011, and which contains the reports issued by the Secretariat for the SCRS and the Commission, i.e. the Secretariat Report on Statistics and Coordination of Research, the Financial and Administrative Reports, and the ICCAT Secretariat Reports to the Conservation and Management Measures Compliance Committee (COC) and the Permanent Working Group for the Improvement of ICCAT Statistics and Conservation Measures (PWG).

Volume 47 of the Statistical Bulletin was published on 31 January 2022 as an electronic version. The current edition provides the catches and other statistics series for the period 1950 to 2020.

Given the Secretariat's workload and the request to reduce the publication time of the ICCAT Collective Volume of Scientific Papers and considering that a significant number of authors do not follow the publication guidelines provided, the SCRS agreed in 2014 that those papers not meeting the minimum standards would not be published. As a result, since 2017 the list of unpublished papers in the volume includes those withdrawn by the authors and those which failed to meet the minimum established publication standards. The Secretariat also adopted the necessary measures in 2017 to ensure that documents are published in electronic format soon after subcommittee and species group and working group meetings. As a result of these changes in the publication process, in 2021 the Secretariat completed publication of volume 78 (completed issues 1 to 10) and has already published issues 1 to 4 and issue 5 partially of volume 79 of the ICCAT Collective Volume of Scientific Papers.

6.2 ICCAT Manual

Following the requests regarding the update and expansion of Chapter 2 of the ICCAT Manual, in 2021 the Secretariat hired experts to revise the current chapters for the following small tunas and shark species: Bonito (*Sarda sarda*), Bullet tuna (*Auxis rochei*), Frigate tuna (*A. thazard*), King mackerel (*Scomberomorus cavalla*), Little tunny (*Euthynnus alletteratus*), Spanish mackerel (*Scomberomorus maculatus*), Blackfin tuna (*Thunnus atlanticus*), Blue shark (*Prionace glauca*), Shortfin mako (*Isurus oxyrinchus*), Porbeagle (*Lamna nasus*), Common thresher (*Alopias vulpinus*), Bigeye thresher (*Alopias superciliosus*), Oceanic whitetip (*Carcharhinus longimanus*), Scalloped hammerhead (*Sphyrna lewini*), Smooth hammerhead *Cornuda cruz* (*S. zygaena*) and Great hammerhead (*S. mokarran*).

In addition, in 2021 new species chapters were prepared for the following small tunas and shark species: Wahoo (*Acanthocybium solandri*), Serra Spanish mackerel (*S. brasiliensis*), Cero (*S. regalis*), Plain bonito (*Orcynopsis unicolor*), Silky shark (*C. falciformis*), Longfin mako (*I. paucus*), Crocodile shark (*Pseudocarcharias kamoharai*) and Pelagic stingray (*Pteroplatytrygon violacea*). A new chapter for narrow-barred Spanish mackerel (*Scomberomorus commerson*) has been produced in 2022.

These chapters have been revised and translated by the Secretariat, and in 2022 have been reviewed by SCRS experts. Most final revisions to the chapters have now been completed and their publication is scheduled for the end of 2022.

6.3 ICCAT website

The ICCAT website, in the three official languages of the Commission, continues to be updated on a regular basis to provide better service to users. Development of the webpage and search engine for scientific documents has been completed and following the SCRS request a new tool enables searches for SCRS documents published in the ICCAT Collective Volume of Scientific Papers since 1973, by using different parameters and criteria.

However, there is a need to keep improving our webpage and maintain its standards. In response to the vulnerabilities report in relation to the website submitted to us by the external company to which the comprehensive security analysis was entrusted and to the need to offer new more interactive functionalities for viewing information on our databases and via the website, like the one that was developed last year to search for scientific documents, an overhaul of the website is considered necessary to adapt it aesthetically and functionally to the new required needs.

This change will include the following steps:

- Comprehensive analysis of the information displayed on our website to standardise contents and adapt these to the new required needs.
- Aesthetic and visual change of the website to facilitate the search for contents, it being accessible from the different devices standardly used. As for the current website, users will be recommended to update their search engines for optimal viewing.
- Implementation of new ways to view data through dashboard tools or mapping viewers, which will enable us to access the information in a dynamic and interactive manner.

- Migration of the programming modules on the website for database searches and other different responses offered to the user, more up-to-date programming models that provide flexibility when these different requests are displayed on our website.

The estimated timeframe for these changes, which will entail continuous coordination between the different departments involved in this task, is 12 months. It should be noted that the first task to be carried out is the aesthetic change and its publication, the remainder of the programming migrations described above being less visible for the end user.

7. International activities

7.1 Coordinating Working Group on Fishery Statistics (CWP)

The ICCAT Secretariat has participated (online) in the FAO-CWP 29th Intersessional Meeting of the Fisheries Subject Group (CWP-FS, 20-23 June 2022). During 2022, the ICCAT Secretariat has maintained a close collaboration with CWP partners (includes all the 5 t-RFMOs) statistical experts, by sharing the ICCAT most relevant CWP related statistical activities of 2021 and 2022 and collaborating on both technical level and on the solution of various data issues (data corrections, coding systems, application of CWP fisheries harmonization standards and concepts, data exchange, etc.). The 5 t-RFMOs have also informed the CWP on the progress of their online data systems (ICCAT presented the IOMS), focusing mostly on the development status, technical specifications, and main mid/long term goals. All the 5 t-RFMOs have under development or are planning online data systems. Overall, they have differences in these three aspects but with more similar objectives. It was noted that this sharing of experiences and knowledge among the t-RFMOs can reduce those differences in the long run.

7.2 Fisheries and Resources Monitoring System (FIRMS)

ICCAT is a partner of the FAO-FIRMS that provides access to information on the global monitoring and management of fishery marine resources. As such the Secretariat provides regular updates for the stock status of ICCAT species (<http://firms.fao.org/firms/en>) assessed by the SCRS. Due to the pandemic and busy schedule in 2021, the Secretariat has scheduled the updates of skipjack tuna, north-eastern porbeagle, Atlantic swordfish stocks, and Eastern Atlantic and Mediterranean bluefin tuna.

The ICCAT Secretariat attended the 12th Steering Committee Meeting of the Fisheries and Resources Monitoring System (FIRMS) held online on October 18-21, 2021. The primary aim of FIRMS (that is housed by FAO) is to provide access to information on the global monitoring and management of fishery marine resources. ICCAT continues to provide data to support their initiative. The group reviewed the progress on the new FIRMS information system developed under the BlueBRIDGE project, including the Global Tuna Atlas (GTA) and the Global Record of Stocks and Fisheries. Under the ambit of the FIRMS strategic plan for the 2020-30 decade, the ICCAT Secretariat has participated in the 15th Technical Virtual Meeting of the GTA system (9 February 2022) aiming its fine-tuning and launch its official release ([release news](#)). As of today, the GTA system contains the ICCAT public statistical information (Task 1 nominal catches and Task 2 catch & effort) currently published in the ICCAT website (planned for the future the same approach: updated in January each year). The ICCAT Secretariat also informed the group about the time and staff limitations to address the existing FIRMS requirements. It was further noted that ICCAT is in the process of updating its Data Confidentiality Policy, and that future data submission will follow those policy requirements.

7.3 ASFA

Since the last SCRS meeting, the Secretariat has prepared 8 new entries (71.4, 71.5, 71.6, 72.1, 72.2, 72.3, 72.4, 72.5) for the Aquatic Sciences and Fisheries Abstracts (ASFA-ProQuest) database, from the papers published in the most recent issues of the ICCAT Collective Volume of Scientific Papers.

7.4 EU Regional Coordination Group Large Pelagics (RCG LP)

In 2022, the ICCAT Secretariat has participated virtually in two meetings of the European Union (EU) Regional Coordination Group on Large Pelagics (RCG-LP). The 2022 RCG-LP annual meeting (15 to 17 June 2022) and RCG-LP Regional Database (RCG-LP-RDSG) Development Subgroup Technical Meeting

(11 March 2022). ICCAT is a potential beneficiary of the outcomes planned by the RCG-LP and their subgroups on the provision by EU Member States of fisheries and biological data, through the EU data collection framework (DCF). The Secretariat presented to both groups the various aspects of the ICCAT data collection system, namely the data call process, the types of fisheries statistics and biological data compiled together with the corresponding formats, the submission and validation process using some of the SCRS instruments developed (filtering criteria, report cards, catalogues, scorecard, etc.), among others. Special attention was given to the way the data transmission failures (due to errors and/or incompleteness in the datasets reported) are handled by the EU and ICCAT in relation to EU Member State data provision. The RCG-LP recognised again that the existing practice of sending a yearly report to the EU (DG-MARE) (prepared by the ICCAT Secretariat around October) on the “EU reporting status” is a good instrument used to track with some level of detail the data provision failures of EU Member States. The Secretariat noted that the report still has potential for improvements in the future. In the RCG-LP-RDSG meeting, ICCAT database expertise was provided to guide the group on the decisions on the database architecture to be adopted to handle the DCF information in an efficient and effective way.

It was also discussed the important role of GBYP (Atlantic-Wide Research Programme for Bluefin Tuna) and other ICCAT Data Collection and Research Programmes, aiming the best scientific knowledge on ICCAT species and provision of advice to the Commission. Specifically, as in previous meetings of the RCG-LP, the potential synergies between ICCAT Programmes and EU DCF sampling activities were highlighted. As an example, it was emphasized the role that GBYP could play in contributing to the design and implementation of a standardized and efficient BFT sampling scheme, coordinated not only at EU but at global level.

7.5 Cooperation agreement with WECAFC

Following a request of cooperation from the Western and Central Atlantic Fisheries Commission (WECAFC) Secretariat, in 2021 the Secretariat coordinated comments from a group of SCRS experts on the WECAFC draft Regional Plan of Action (RPOA) for Sharks. In late 2021 and first half of 2022, the RPOA was further developed and included contributions of SCRS experts and the Secretariat.

In addition, the Executive Secretary attended the *Eighteenth session of the Western Central Atlantic Fishery Commission*. He informed WECAFC that a letter of cooperation under the umbrella of the agreement between FAO and ICCAT is being drafted, to serve as a formal channel of cooperation between ICCAT and WECAFC in the absence of agreement on the language of the draft MoU text that had been proposed and adopted by the Commission in 2019. This draft letter of cooperation will be exchanged between the two Secretariats in order to identify the lines of cooperation between the two organisations.

7.6 Proposed Global Environment Fund (GEF) Projects

In 2021 and 2022, the ICCAT Secretariat coordinated with the Food and Agricultural Organization of the United Nations (FAO) to develop proposals for the Global Environment Fund (GEF) for funding four projects that if funded would begin in late 2022 or early 2023. Projects range in duration from three to five years. The proposals are designed to obtain GEF monies to support priority activities for the science and management of ICCAT species.

ICCAT had four proposals approved for funding for GEF funds. The first project (five years) is to improve compliance with ICCAT conservation and management measures, in particular, but not limited to Port Inspection, which will consist mainly in adding an ICCAT module onto training courses organised by other organisations. The second project (five years) is to enhance the ICCAT Integrated Online Management System, IOMS, here the funding would help support centralised online data management (reporting, validation, storage, availability, etc.) systems that are fundamental to the successful implementation of modern-day conservation and management measures. The third project (three years) aims to generate ecosystem-based operating models for the testing of ecosystem indicators and management policies so that the validity of given indicators for stock status or ecosystem state can be tested to determine when such indicators accurately reflect the underlying stock or system dynamics. The fourth project (three years) will provide technical support for harmonization of technical work between RFMOs. This project will allow RFMOs to coordinate to identify and address common challenges in a harmonized manner, and for conveying key messages to civil society regarding progress in fisheries management, particularly in the context of ongoing BBNJ discussions and the UNFSA review process.

The Secretariat is currently working with FAO to develop a Letter of Agreement to administer the funds.

7.7 ICES

In late 2021 the Secretariat received a data request from ICES aiming the North-eastern Atlantic Porbeagle stock assessment. At the time we reminded the ICES Secretariat that the stock assessment should be a joint effort by ICCAT and ICES. Although at short notice, to undertake the assessment of northeast Atlantic porbeagle stock, the ICES Working Group on Elasmobranchs (WKELASMO) and Shark Species Group (SHK SG) of the Standing Committee of Research and Statistics (SCRS) of the International Commission for the Conservation of Atlantic Tunas (ICCAT) held a series of meetings between late 2021 and July 2022 (see item 2022 SCRS agenda item 8).

The Secretariat contributed extensively to this stock assessment, namely presenting at this set of meetings documents reviewing the catch series (SCRS/2022/022), analyses of different assessment model formulations (SCRS/2022/042 and SCRS/2022/053) and documents presenting closed-loop simulations examining the conservation and yield performance of alternative harvest control rules (SCRS/2022/090), plus finally an analysis of the effect of non-linear relationships between CPUE and abundance (SCRS/2022/092).

Unfortunately, the data and assessment model were where the agreement between ICES and ICCAT scientists ended. While the original agreement of the porbeagle subgroup of the WGEF and ICCAT was to have an inter-benchmark to agree on the advice, the ICES Advisory Committee (ACOM) overruled the decision of the WGEF to have an inter-benchmark meeting. Accordingly, ICCAT provided no additional comment on the ICES advice sheet.

7.8 GFCM

The collaboration with GFCM has been further developed. The Executive Secretary attended the Workshop on the GFCM-Lex, a pilot project conducted in three countries in the Mediterranean. The GFCM-Lex is a tool aiming to facilitate access of various stakeholders to relevant national legislation on fisheries, management and conservation of marine living resources and ecosystems.

7.9 Regional Fishery Body Secretariats' Network (RSN) and FAO Committee of Fisheries (COFI)

The Executive Secretary attended the 9th Meeting Regional Fishery Body Secretariats' Network (RSN) held in the margins of the COFI-35 meeting. He updated the RSN members on the latest developments in ICCAT and had the opportunity to exchange views, information and experiences with other representatives of the different secretariats concerning the issues of common concern.

During the meeting RSN adopted its Terms of References and Rules of Procedure, concluding a process started in previous years. The RSN also elected a new Chair (Darius Campbell, Secretary, North-East Atlantic Fisheries Commission) and a Vice-Chair (Manu Tupou-Roosen, Director General at Pacific Islands Forum Fisheries Agency). In its last session, the RSN welcomed the discussions during the COFI meeting, with positive views from delegates about the role of fisheries organizations while calling for more cooperation between them.

In the margins of the meeting, IATTC, WCPFC, IOTC and ICCAT met informally to discuss some common issues and how to better coordinate. Potential activities in the framework of ABNJ2 and the improvement of the Tuna-org website were also discussed.

COFI continued to appeal to combat IUU fishing through implementation of the various relevant instruments, to mainstream biodiversity in fisheries and aquaculture, for more progress in the work on fisheries and aquaculture in relation to climate change, and broadly supports the establishment of the Sub-Committee on Fisheries Management. It also stressed the importance of cooperation among fisheries bodies and appreciated the work of the RSN.

7.10 Informal Consultations of States Parties (ICSP) to the Agreement for the Implementation of the Provisions of the UNCLOS relating to the Fish Stock Agreement

The 15th ICSP focused on the “Implementation of an ecosystem approach to fisheries management”. The ICCAT reported that its mandate has been evolving since its inception in 1966 with an increasing number of species and has been implementing the elements of the ecosystem approach for fisheries management (EAFM) for more than a decade with initiatives for the conservation of seabirds, turtles, and sharks. In addition, it also conveyed that ICCAT has an explicit mandate for EAFM through its recently amended Convention. ICCAT further informed the ICSP that it continues to expand and strengthen its cooperation with many organisations, including all five tuna Regional Fisheries Management Organizations and other fisheries organisations and NGOs.

7.11 BBNJ process

The Executive Secretary attended the Fifth session: Intergovernmental conference on an international legally binding instrument under the United Nations Convention on the Law of the Sea on the conservation and sustainable use of marine biological diversity of areas beyond national jurisdiction. The meeting continued the discussions on the Chair of the Conference draft text, relating to the topics identified in the package agreed upon in 2011: the conservation and sustainable use of marine biological diversity of areas beyond national jurisdiction, in particular, together and as a whole, marine genetic resources, including questions on the sharing of benefits, measures such as area-based management tools, including marine protected areas, environmental impact assessments and capacity-building and the transfer of marine technology.

Given the impossibility of reaching an agreement on the draft text despite the progress noted, the Intergovernmental Conference decided to suspend the fifth session and resume it at a date to be determined, aiming to conclude the negotiations with a new instrument. It is worth noting the importance of more coordination and inclusion of fisheries experts in delegations participating in these BBNJ negotiation processes.

7.12 Mediterranean Advisory Council (MEDAC)

The Mediterranean Advisory Council’s (MEDAC) role includes the preparation of opinions on fisheries management and socio-economic aspects in support of the fisheries sector in the Mediterranean, to be submitted to the European Member States and institutions in order to facilitate the achievement of the objectives of the European Union Common Fisheries Policy.

The Secretariat participated in the MEDAC meeting on 17 October 2022. It was presented the preliminary conclusions and the SCRS management advice for the stocks of East bluefin tuna, Mediterranean swordfish, and Mediterranean albacore. It also presented the ICCAT BFT-MSE current status and key decision points remaining for the upcoming meeting of the Commission and its possible final adoption.

8. ICCAT Scientific programmes

The activities of the Atlantic-Wide Bluefin Research Programme (ICCAT GBYP), Year Research Programme for Small Tunas (ICCAT SMTYP), the Shark Research and Data Collection Programme (SRDCP), the Enhanced Research Programme for Billfish (ICCAT ERPB), Albacore year programme and Swordfish Year programme are presented separately in reports to the SCRS (see documents PLE-104/2022, 2022 SCRS Report).

The Secretariat’s participation in these programmes mainly consists of administrative and scientific support. In the administrative area, the Secretariat assists with coordination of research proposals, Calls for tenders/Quotation requests, and funds administration, and oversees the auditory and accounting responsibilities of these programmes. As regards scientific support, the Secretariat plays a major role in liaising between the SCRS and the programme coordinators on the design of research proposals, Calls for tenders, evaluation of proposals, coordination of research and database management, as well as IT support for each of the programmes. As in the past, during 2022 the Secretariat actively participated in several of the research programmes components.

9. Other activities

9.1 *Improving synergies between Regional Fishery Bodies and CITES Authorities*

The ICCAT Bycatch Coordinator was asked to serve as a co-moderator in a set of workshops run by the German Government tentatively called “Improving synergies between Regional Fishery Bodies and CITES Authorities”, which is an initiative that is intended to identify opportunities to strengthen joint sustainable catch, trade and management measures for sharks and rays. The intention is for there to be a first workshop in November 2021 that will discuss the current strengths and weaknesses of current relationships between fisheries and conservation management to identify opportunities for improvement. One key objective of the meeting is establishing an agreement on if it is worthwhile to proceed with a second workshop. The final date for the workshop has not yet been determined. A second workshop was held in July 2022. It focused on potential approaches to improving collaboration. The expectation is to have a third workshop in 2023 and an in-person summit in Hamburg Germany.

9.2 *SIMERPE Symposium*

The Secretariat participated in a symposium organized to review the current status of modeling and assessment of fisheries resources of the Portuguese and Spanish marine fisheries resources and the evolution towards more sustainable management advice provision, SIMERPE 19-22 October 2021, Vigo, Spain. National scientists and representatives from RFBs (ICES, NAFO, GFCM, ICCAT) presented the process for generating scientific advice and their management implementation. It was presented the process for the Management Strategy Evaluation (MSE) approach and current implementation in different RFBs, as well as considerations of the Ecosystem Approach to fisheries management and its current status. It was highlighted that most of the scientific advice is moving from the traditional single best assessment approach towards more uncertainty uncertainty-integrated approaches, where multiple plausible states of nature are being considered and taken into account for providing scientific advice. Here, the Management Strategy Evaluation (MSE) approach was presented as the more inclusive and robust approach for generating management advice. However, it was noted that MSE is not similar in all RFBs, in part due to the scope, the number of assessments, data and expertise limitations, and the time that a full MSE will require, citing the ICCAT BFT MSE process development.

10. ICCAT funds for data improvement and capacity building

To improve data collection and strengthen the capacity of the scientists from developing Parties, the Japanese Government created an initial data improvement project, which was continued in a second phase by the ICCAT/Japan Data and Management Improvement Project (JDMIP), in a third phase by the ICCAT/Japan Capacity-Building Assistance Improvement Project (JCAP), and since December 2019 in a fourth phase by the ICCAT/Japan Capacity-Building Assistance Improvement Project (Phase 2) (JCAP-2) (a report was recently presented to the SCRS, as document SCI-08/2022).

Besides this project, there is also a Data Fund, which was established through the *Resolution by ICCAT on Improvements in Data Collection and Quality Assurance* (Res. 03-21). The Data Fund is open to voluntary contributions from the Contracting Parties. To date, only the United States has contributed to this fund.

The European Union and the United States created their own capacity building funds for data collection and analysis of data and stock assessment methods, as well as to facilitate participation in SCRS meetings.

In 2013, the Commission adopted the *Recommendation by ICCAT on the Establishment of a Scientific Capacity Building Fund for Developing States which are ICCAT Contracting Parties* (Rec. 13-19) which establishes a Special Capacity Building Fund (SCBF) to support scientists from ICCAT Contracting Parties that are developing States, regarding their need to acquire knowledge and develop capacities in ICCAT related issues.

In 2014, the Commission adopted the *Recommendation by ICCAT amending Recommendation 11-26 on the Establishment of a Meeting Participation Fund for Developing Contracting Parties* (Rec. 14-14), for the participation in both the SCRS and Commission meetings. Subsequently, in 2014, the Commission adopted the *Rules of Procedure for the Administration of the Special Meeting Participation Fund* which regulated the deadlines for submission of funding requests and stipulated the documentation required. In 2020, the Rules of Procedure for the Administration of the Special Meeting Participation Fund ([Ref. 20-10](#)) were updated.

To support the SCRS work, during its 2021 Annual Meeting the Commission approved a total amount of €404,500 for the 2022 Science Envelope. In addition, a contract was entered into with the European Union in March 2022 (€701,385.00) to finance 64% of the scientific activities of the Commission in 2022 (€450,000.00), within the framework of the Strategic Research Programme, that were not covered by the regular budget, the United States has confirmed its support to cover the costs of the Enhanced Programme for Billfish Research Data Fund (€30,000.00) and Chinese Taipei has contributed €4,000.

In 2012, the SCRS approved a protocol to use the Data Fund and other ICCAT funds. This protocol defines a broad structure for use of the funds which includes improvement of statistics, training and support of SCRS work, including attendance to meetings. The protocol also includes the criteria to be followed for allocation of funds.

On the basis of this protocol, in 2022 the funds have been used as follows:

Participation at SCRS meetings: Due to the pandemic most SCRS meetings were held online. However, financial assistance was requested and provided to 14 scientists and managers to attend the following meetings hybrid meetings:

- 1) Eastern Atlantic and Mediterranean Bluefin Tuna Stock Assessment Meeting (4-9 July 2022, Madrid, Spain);
- 2) Atlantic Swordfish Stock Assessment Meeting (20-28 June 2022, Madrid, Spain)
- 3) SCRS Subcommittee on Statistics and Species Group meetings (19-24 September 2022, Madrid, Spain);
- 4) SCRS Plenary meeting (26-30 September 2022, Madrid, Spain).

Workshops: financial assistance for instructors/experts to travel:

- 1) Workshop on exchange of experiences and capacity building for installation of satellite transmitters (2 to 4 August 2022, R o Grande do Sul, Brazil)
- 2) Workshop on the ongoing collaborative work on marine turtle bycatch in ICCAT fisheries (3 to 7 October 2022, Malaga, Spain)

Improvement of statistics:

- 1) Reinforcement of data collection, monitoring for tuna fisheries, and adaptation to new catch documentation scheme of Statistic System in Belize.
- 2) Pilot study proposal for Automatic fish count and length/weight estimation system for Bluefin Tuna in Moroccan Atlantic Farm.

Enhance scientific capacity building:

- 1) A young researcher from Uruguay (Federico M s) received financial support for a 2-month internship training at a European research centre (12 March - 12 May 2022, Instituto Portugu s do Mar e da Atmosfera - IPMA, Portugal).

SCRS activities funded:

1. Short-term contract extension to AOTTP awareness and tag recovery activities in Senegal;
2. Short-term contract to AOTTP awareness and tag recovery activities in Senegal;
3. Short-term contract extension to AOTTP awareness and tag recovery activities in C te d'Ivoire;
4. Short-term contract to AOTTP awareness and tag recovery activities in C te d'Ivoire;

5. Short-term contract for tagging activities in north-west Atlantic following the closure of the Atlantic Ocean Tropical Tunas Tagging Programme (AOTTP);
6. Short-term contract for development of the western Atlantic skipjack management strategy evaluation;
7. Short-term contract extension for development of the western Atlantic skipjack management strategy evaluation
8. Short-term contract for investigation into bycatch estimation methodologies
9. Short-term contract extension for investigation into bycatch estimation methodologies
10. Short-term contract for ICCAT SMTYP for the biological samples collection for growth, maturity and genetics studies
11. Short-term contract for ICCAT for update ICCAT manual chapter 2 (small tunas section)
12. Short-term contract extension for collection of biological samples for growth study on billfish in the eastern Atlantic
13. Short-term contract extension for ICCAT swordfish biological samples collection for growth, reproduction and genetics studies
14. Short-term contract extension for modelling approaches: support for the ICCAT North Atlantic swordfish from MSE process
15. Short-term contract extension for ICCAT North Atlantic albacore tuna reproductive biology study
16. Short-term contract for extension ICCAT South Atlantic albacore tuna reproductive biology study
17. Short-term contract extension for improvement of the North Atlantic albacore management strategy evaluation (MSE) framework: stock synthesis reference case
18. Electronic PSAT tagging of Atlantic swordfish, Atlantic albacore and Atlantic pelagic sharks;
19. Short-term contract for mitogenomics and nuclear-genome-wide single-nucleotide polymorphism genotyping resolve the genetic population structure of Atlantic shortfin mako (*Isurus oxyrinchus*) and preliminary analysis of genetic population structure of Atlantic porbeagle (*Lamna nasus*)
20. Short-term contract for ICCAT for update of ICCAT Manual chapter 2 (small tunas section).
21. Short-term contract for work supporting a quasi-quantitative risk assessment approach.

11. Major statistical and IT Tasks planned for 2023

The Secretariat has been working since 2017 on the ICCAT Integrated Online Managements System (IOMS). After being adopted by the SCRS and the Commission, the Commission's Online Reporting Technical Working Group (WG-ORT) has overseen the specifications and the governance of all the development process. The last WG-TOR intersessional meeting held in February 2022 (see [report](#)) delineated the content of the future work to be presented at the 2022 Commission meeting for revision and approval. The IOMS has been in production since 1 August 2021 (experimental year) and is now officially managing the 2022 Annual Reports of the ICCAT CPCs. The IOMS is a crucial long-term ICCAT project that requires the full involvement/commitment of the Secretariat.

Additionally, the following tasks represent continuous database improvements and maintenance that will continue during 2022 and beyond. The priority tasks (including the ones postponed in 2020/21) for 2021/2022 include:

- Upgrade all the ICCAT-DB system from MS-SQL server 2016 to MS-SQL server 2019
- Replace the stand-alone MS-ACCESS Task 2 databases on the web by SQLite equivalent ones
- Improve the "client applications" that manage the databases of the ICCAT-DB system
- Continue the development of the statistical/tagging dashboards (dynamic querying)
- Continue the tagging database development for both conventional and electronic tagging;
- Continue the Biological Sampling database development (includes data recovery/integration)
- Continue the standardization of the electronic forms (TG: tagging forms, CP: compliance forms)
- Extend the automatic data integration tools for the standardized electronic forms
- Continue the development of the GIS project (create a PostGIS server and geo-reference for all the ICCAT data available in ICCAT-DB)
- The adaptation/migration of all the databases of the ICCAT-DB system to the new ICCAT IOMS system

12. Secretariat staff and organization

Taking into account the increase in functions and the cross-functionality, in March 2022 the Department of Research and Statistics was split into two new departments: i) Department of Statistics staffed by seven people, which is headed by Mr. Carlos Palma; and ii) Science Department staffed by three people, that is headed by Dr Mauricio Ortiz. The webmaster (Mr. Juan Carlos Munoz) moved to the Department of Translation and Publication.

Ms. Marisa de Andrés, a previous Spanish translator at the Secretariat took the new position of Publications editor. Consequently, a new Spanish translator (Ms. Beatriz Motos) was hired in May 2022. Finally, in June 2022 Ms. Dawn Baity took the new position of Technical Officer in the Compliance Department.

Detailed information on the structure and the Secretariat staff is available on the ICCAT website (<https://www.iccat.int/en/staff.html>).

Since the beginning of the COVID-19 pandemic, the Secretariat has been following the health and work recommendations implemented by the national and regional authorities. In May 2022, following the improvement of the pandemic state in Madrid, the staff returned to the Secretariat. A mix model was implemented consisting of presential and remote work, which will be kept until the end of the year. Accordingly, all the activities of the Secretariat were maintained, including those related to the meetings, some of which had a hybrid format. The Secretariat thanks all CPCs' authorities and scientists for their efforts and support during these pandemic times and expresses its wishes for a healthy and prompt return to normal activities. Thanks also to the staff, for their commitment and ability to rapidly adjust to a mixed working model while maintaining the standards of the work.

Table 1. Task 1 fleet characteristics (form ST01-T1FC) submission status for 2021 data sent to ICCAT during the Reporting Period ("green": before deadline; "yellow": after deadline; "orange": has not passed Filter 1 (scenario 2); "blank": not reported or no active fleets).
 Tableau 1. Table 7. Summary of the total number of conventional tags by flag (released and/or recovered, covering all ICCAT species) reported to ICCAT during the Reporting Period. The figures shown include data received directly by ICCAT, as well as those provided by the GBYP and AOTTP projects.

Tableau 7. Résumé du nombre total de marques conventionnelles par pavillon (apposées et/ou récupérées, couvrant toutes les espèces de l'ICCAT) déclarées à l'ICCAT au cours de la période de déclaration. Les chiffres indiqués incluent les données reçues directement par l'ICCAT ainsi que les données fournies par les projets GBYP et AOTTP.

Tabla 7. Resumen de número marcas convencionales por pabellón (colocadas y/o recuperadas, para todas las especies de ICCAT) comunicadas a ICCAT durante el periodo de comunicación. Las cifras mostradas incluyen los datos recibidos directamente por ICCAT, así como los aportados por los proyectos GBYP y AOTTP.

Figure 2. Number of VMS signals received from vessels authorised to fish bluefin tuna between 2021-10-01 and 2022-10-07. Aggregated information by 1 degree squares for the Mediterranean Sea. The data do not contemplate positions in port (according to the integrated algorithm).

Figure 2. Nombre de signaux VMS reçus de navires autorisés à pêcher du thon rouge entre le 1er octobre 2021 et le 7 octobre 2022. Information agrégée en carrés de 1 degré pour la mer Méditerranée. Les données ne tiennent pas compte des positions au port (selon l'algorithme intégré).

Figura 2. Número de señales de VMS recibidas de buques autorizados a pescar atún rojo entre 2021-10-01 a 2022-10-07. Información agregada por cuadrículas de 1 grado para el mar Mediterráneo. Los datos no consideran las posiciones en puerto (según el algoritmo integrado).

APPENDIX 1 / Appendice 1 / Apéndice 1

Appendix 1. Standard SCRS catalogues on statistics (Task 1 and Task 2) of the 13 major ICCAT species (10 tuna & tuna like species and 3 shark species) by stock, major fishery (flag/gear combinations ranked by order of importance) and year (1992 to 2021). Only the most important fisheries (representing ±97.5% of Task-I total catch) are shown. For each data series, Task I (DSet= "t1", in t) is visualised against its equivalent Task II availability (DSet= "t2") scheme. The Task-II colour scheme, has a concatenation of characters ("a"= T2CE exists; "b"= T2SZ exists; "c"= T2CS exists) that represents the Task-II data availability in the ICCAT-DB. See the legend for the colour scheme pattern definitions.

Appendice 1. Catalogues standard du SCRS sur les statistiques (Tâche 1 et Tâche 2) des 13 espèces principales de l'ICCAT (10 espèces de thonidés et espèces apparentées et 3 espèces de requins) par stock, pêcherie principale (combinaisons pavillon-engin classées par ordre d'importance) et année (1992 à 2021). Seules les pêcheries les plus importantes (représentant ±97,5% de la prise de Tâche I) sont présentées. Chaque série de données de la Tâche I (DSet= "t1", en tonnes) est représentée par rapport au schéma de disponibilité équivalent de la Tâche II (DSet= "t2"). Le schéma de couleurs de Tâche II présente une concaténation de caractères ("a"= T2CE existe; "b"= T2SZ existe; "c"= T2CS existe) qui représente la disponibilité des données de Tâche II dans la base de données de l'ICCAT. Veuillez vous reporter aux légendes pour les définitions du schéma de couleurs.

Apéndice 1. Catálogos estándar del SCRS sobre estadísticas (Tarea 1 y Tarea 2) de las 13 especies principales de ICCAT (10 especies de túnidos y especies afines y 3 especies de tiburones) por stock, pesquería principal (combinaciones arte/pabellón clasificadas por orden de importancia) y año (1992 a 2021). Solo se muestran las pesquerías más importantes (que representan ±97,5% de la captura total de Tarea I). Cada serie de datos de Tarea I (DSet= "t1", en t) se visualiza con respecto a su esquema equivalente de disponibilidad de Tarea II (DSet= "t2"). En el esquema de colores de Tarea II, se incluye una concatenación de caracteres ("a"= T2CE existe; "b"= T2SZ existe; "c"= T2CS existe) que representa la disponibilidad de datos de Tarea II en la base de datos de ICCAT. Véase la leyenda para las definiciones del patrón del esquema de colores.

Table 7. BET-A stock (AT + MD)

Table with 35 columns for years (1992-2021) and columns for Rank, %, %cum. Rows represent different species and gear types, with values for each year and a final 'a' column. Values are color-coded (green for positive, yellow for zero, red for negative).

10. **Taylor, N.G.**, **Ortiz, M.**, **Kimoto, A.**, Coelho. 2022. Preliminary closed-loop simulations for Northeast Porbeagle Shark: Illustrating the efficacy of alternative Management Procedures and assessment frequency. SCRS/2022/090
11. **Kimoto A.**, Arrizabalaga H., **Ortiz M.**, Merino G., Urtizberea A., Ortiz de Zárata V., Palma C., Mayor C., and Lauretta M. Summary of preliminary input data (catch and size) for the north Atlantic albacore stock synthesis in 2022. SCRS/2022/065
12. **Ortiz, M.**, **Taylor, N.G.**, **Kimoto, A.**, Forselledo, R., Coelho, R., Arrizabalaga, H., 2022. Additional Analysis on the stock assessment of northeast Atlantic porbeagle (*Lamna nasus*) using the SPiCT surplus production model. SCRS/2022/053
13. **Ortiz, M.**, **Taylor, N.G.**, **Kimoto, A.**, and Forselledo, R. 2022. Preliminary stock assessment of northeastern Atlantic porbeagle (*Lamna nasus*) using the Bayesian state-space surplus production model JABBA. SCRS/2022/042
14. **Ortiz M.**, **Mayor C.**, **Palma C.**, and **Taylor N.G.** 2021. Review of the Catch Series for Northeast Porbeagle (*Lamna nasus*) as Input for Stock Assessment. SCRS/2022/022
15. **Kimoto, A.**, **Ortiz M.**, and **Taylor, N.G.** 2022. Review of fleet structure for the Stock Synthesis assessment model for the Northern and South Atlantic swordfish stocks. SCRS/2022/041
16. **Ortiz M.** and **Kimoto A.** 2022. Review and preliminary analyses of size samples of east and west

Atlantic skipjack tuna stocks (*Katsuwonus pelamis*). SCRS/2022/027.

17. **Kimoto, A., Ortiz M., and Taylor, N.G.** 2022. [Review of fleet structure for the Stock Synthesis assessment model for the Northern and South Atlantic swordfish stocks](#). Collect. Vol. Sci. Pap. ICCAT, 79(2): 134-155
18. **Ortiz M. and Kimoto A.**, 2022. [Review and preliminary analyses of size samples of North and South Atlantic swordfish stocks \(*Xiphias gladius*\)](#). Collect. Vol. Sci. Pap. ICCAT, 79(2): 347-382
19. Rouyer T., **Kimoto A.**, Zarrad R., **Ortiz M., Palma C., Mayor C.**, Lauretta M., Rodriguez-Marin E., and Walter J. 2022. [Data and initial model set-up for the 2022 VPA stock assessment of the eastern Atlantic and Mediterranean bluefin tuna](#). Collect. Vol. Sci. Pap. ICCAT, 79(3): 161-187
20. Sampedro P., **Kimoto A., Ortiz M.**, Sharma R., Fukuda H., Gordo A., Lauretta M., Rouyer T., Sunderlöf A., Tsukahara Y., Walter J., and Rodríguez-Marín E. 2022. [Data and initial model set-up for the 2022 stock synthesis stock assessment of the eastern Atlantic and Mediterranean bluefin tuna](#). Collect. Vol. Sci. Pap. ICCAT, 79(3): 304-326.
21. **Ortiz M., Kimoto A.** 2022. [Review and preliminary analyses of size samples of East and West Atlantic skipjack tuna stocks \(*Katsuwonus pelamis*\)](#). Collect. Vol. Sci. Pap. ICCAT, 79(1): 176-209
22. Aarestrup K., **Alemaný F.**, Arregui I., Arrizabalaga H., Cabanellas-Reboredo M., Carruthers T., Hanke A., Lauretta M., **Pagá A.**, Rouyer T., **Tensek S.**, Walter J., and Rodriguez-Marin E. Update of electronic tagging data and methodologies for Atlantic bluefin tuna in order to plan future tagging activities. SCRS/2022/069
23. **Alemaný F., Tensek S., and Pagá García A.** ICCAT Atlantic-Wide Research Programme for Bluefin tuna (GBYP) Activity report for Phase 11 and the first part of Phase 12 (2021-2022). SCRS/2022/168
24. **Ortiz M., Mayor C., Alemaný F., and Pagá A.** Analysis and results of weight gain of bluefin tuna (*Thunnus thynnus*) in farms. SCRS/2022/178
25. H. Takeshima, R. Nanba, S. Ooka, D. Ando, A. Hayakawa, S. Kokubun, S. Noda, Y. Takano, R. Yanada, R. Coelho, **M.N. Santos**, E. Cortés, A. Domingo, J.O. de Urbina, K. Sakuma, K. Nohara, D. Tahara, and Y. Semba. Genetic population structure of the Atlantic shortfin mako (*Isurus oxyrinchus*) using mitogenomics and nuclear-genome-wide single-nucleotide polymorphism genotyping. SCRS/2022/170.

List of SCRS presentations that include Secretariat staff in their authorship (in bold)

Liste des présentations du SCRS dont les auteurs sont des membres du Secrétariat (en gras)

Lista de presentaciones SCRS que incluyen a miembros de la Secretaría entre sus autores (en negrita)

1. Rouyer T., **Kimoto A.**, Zarrad R., **Ortiz M., Palma C., Mayor C.**, Lauretta M., Rodriguez-Marin E., and Walter J. The 2022 VPA stock assessment preliminary results of the eastern Atlantic and Mediterranean bluefin tuna. SCRS/P/2022/015
2. Sampedro P., **Kimoto A., Ortiz M.**, Sharma R., Fukuda H., Gordo A., Lauretta M., Rouyer T., Sunderlöf A., Tsukahara Y., Walter J., and Rodríguez-Marín E. The 2022 Stock Synthesis stock assessment preliminary results of the eastern Atlantic and Mediterranean bluefin tuna. SCRS/P/2022/016
3. **Alemaný F., Tensek S., and Pagá A.** GBYP Aerial survey: overview and latest results. SCRS/P/2022/018

4. **Alemaný F., Tensek S., and Pagá A.** Updating on GBYP matters. SCRS/P/2022/019
5. **Palma C., Taylor N.G., and Mayor C.** Update of the meta-analysis on the effects of hook, bait, and leader type on retention and at-haulback mortality rates of target and bycatch species. SCRS/P/2022/032
6. Rouyer T., **A. Kimoto**, R. Zarrad, **M. Ortiz, C. Palma, C. Mayor**, M. Lauretta, A. Gordo, E. Rodríguez Marín and J. Walter. Model results and initial projections for the 2022 VPA stock assessment of the eastern and Mediterranean Atlantic bluefin tuna stock. SCRS/P/2022/043
7. **Kimoto A.**, Winker H., Shrippa M., Parker D., Gillespie K., and **Ortiz M.** North Atlantic Swordfish Projection. SCRS/P/2022/045
8. **Ortiz M., C. Mayor, A. Pagá,** and **F. Alemaný.** An Update on the analysis of Weight gain of farm E-BFT. SCRS/P/2022/048
9. **Alemaný F., Tensek S., and Pagá A.** Updating on GBYP matters. SCRS/P/2022/049
10. **Secretariat.** Fisheries & Biological data submitted during 2022 (includes historical revisions). SCRS/P/2022/056
