

## 2023 Secretariat Report on Research and Statistics

The activities and information included in this report refer to the period between 1 October 2022 and 8 October 2023 (the Reporting Period)<sup>1</sup>. All the fisheries statistics, biological statistics and compliance related information have been presented by the Secretariat to the SCRS Working Groups during intersessional and Species Groups meetings. After five years of continuous improvements, the Secretariat observed in the last four years (2019 to 2022) a slight regression in data completion quality. More datasets have only passed the SCRS filtering criteria after the corrections had been made by the Secretariat (more than 90% of the errors linked to incomplete forms and invalid use of ICCAT codes). In addition, many CPC submissions have not used the most recent ICCAT electronic forms (2023 version to report data for 2022 and prior years). The Secretariat will keep working closely with CPCs' scientific correspondents to ameliorate these problems in the future. Regarding the activities conducted by the Secretariat in the most recent years, in addition to the normal activities developed on statistics, publications, data funds management and others, the Secretariat is dedicating substantial additional work related to stock assessment activities and the MSE processes, whether participating actively in the processes or coordinating and managing external support to the SCRS work. The year 2023 was even more difficult for the Secretariat than 2022, due to the high number of SCRS meetings (22), Commission meetings (15), Commission/SCRS meetings (5), as well as Workshops/Webinars (7) in which the Staff was deeply engaged. Such a high number of meetings have greatly impacted the Secretariat staff and limited the capacity of the Secretariat to work in a smoothly and timely manner. In addition, it should be noted that staff from both the Statistics and Science Departments are being requested to attend a considerable number of the Commission meetings. Finally, it is worth noting that a number of meetings are being held online and all in-person meetings have now a hybrid format, which involves an additional workload in terms of associated logistics, preparatory work and online meeting management. Accordingly, it is clear that such a high number of meetings and other events involving the Secretariat is jeopardizing the quality of its contribution, and cannot be kept at recent levels, unless the Commission substantially increase the staff and other financial resources related to the logistics associated to all these events in the ICCAT calendar.

### 1. Statistical and biological information reporting status

ICCAT Circular # 0866 / 2023 [of 3 February 2023](#) established the provisions for reporting fishery statistics and biological data to ICCAT. The receipt date of each email (with the respective files attached) was adopted as the official submission date of the Contracting, Cooperating Party, Entity or Fishing Entity (CPC). The deadlines to report information for the intersessional meetings (required data detailed in the respective species work plans) was established by default as 15 days ahead of the start of the meeting, and were as follows:

- |   |              |
|---|--------------|
| - North Atlantic Albacore Data Preparatory Meeting:       | 5 March 2023 |
| - Blue Shark Data Preparatory Meeting:                    | 2 April 2023 |
| - Sailfish Data Preparatory and Stock Assessment Meeting: | 21 May 2023  |

The general deadline for reporting 2022 statistics (or any required revision to prior years) of all species and fisheries was 31 July 2023. A tolerance of 24 hours has been given to include all the time zones.

A total of 57 ICCAT CPCs [52 Contracting Parties (CP), plus 5 Cooperating non-Contracting Parties/Entities/Fishing Entities (NCC)] have reporting obligations to ICCAT. For statistical purposes, this corresponds to a total of 75 flag related CPCs (50 CP + 1 CP [15 EU Member States] + 1 CP [5 UK flag States] + 5 NCC) who have reported information to ICCAT in recent years. The term "flag CPC" was adopted here to refer to those 75 flags.

---

<sup>1</sup>Only the statistical data received during the Reporting Period by the Secretariat in valid formats (version 2023 of the electronic forms, or special agreed formats) were considered in this report.

The Secretariat continues to use (since 2015) the SCRS filtering criteria (Filters 1 and 2, described in Addendum 2 to Appendix 8 of *Report for Biennial Period, 2012-13, Part II (2013), Vol. 2*, updated by the SCRS in 2017) to validate and accept statistical data received under official formats. The filtering criteria, embedded in the electronic forms since 2015, are always maintained up to date in the latest versions of the statistical forms (i.e., 2023 version).

For 2022 data, Filter 1 was effectively applied and the results are presented in the SCRS Report Cards (**Tables 1, 2, 3, 4, and 5**, with a summary in **Figure 1**). The “orange” cells indicate the associated datasets that have not passed Filter 1. The “green” and “yellow” cells indicate the datasets that have passed Filter 1, and were reported before and after the deadline, respectively. Whenever possible, the Secretariat has corrected the rejected datasets and informed (or will do so shortly) the respective CPCs on the revisions needed. The updated datasets that arrived before 31 July are shown in “green”, and the ones arriving afterwards are shown in “yellow”. The information associated to the “orange” cells were provisionally integrated into the ICCAT database system (ICCAT-DB) and marked for revision. Filter 2 was also applied, and the results presented to the SCRS. Both filters were used on every Task 1 and Task 2 dataset received (scenario 2, methodology described in Palma and Gallego, 2015). The implementation of the SCRS filtering criteria to the remainder of the statistical and tagging forms will be progressively carried out in the following years, because it requires the definition of the filtering criteria for those forms, and that the Secretariat prepare in advance the corresponding databases and forms and develop the data integration tools.

About 95% of all the “ST” statistical forms (ST01, ST02, ST03, ..., ST10) received (a total of about 1,180 forms) during the Reporting Period were automatically processed, validated and stored, using the new JAVA “automated data processing framework” (nearly 100%, discounting the data arriving in special formats). The Secretariat has already enlarged the functionality of this framework to process the remainder of the statistical forms of Task 3 (ST07, ST08, ST09, and ST10) and is working to include the automatic integration of the conventional tagging forms in the mid-term (advancements have been made to the tagging database redesign for both conventional and electronic tagging).

Nineteen flag CPCs have used older SCRS forms to report data from 2022 and prior years. To facilitate the revision process, the Secretariat moved whenever possible the information received in 5 older versions (2017 to 2022 versions) to the 2023 form versions and requested to the respective flag CPC a formal validation of the transformation. Given the increasing number of old versions of statistical forms used to report both new and historical data (~8% of a total of about 1,190 forms submitted during 2023), the Secretariat reminds CPCs of the Commission's requirement of using the MOST RECENT standard electronic forms adopted by the SCRS (part of the filtering criteria) for submitting both NEW and HISTORICAL data. Using historical forms obliges the Secretariat to move all the information of a given form to the most recent equivalent one, which poses an additional and unnecessary burden on the Secretariat. As explained in the past, the Secretariat does not have the means to maintain the code of the unattended data integration tools (import, validate, correct, integrate) developed to work with several historical versions (only the latest one has priority).

The overall reporting status for 2022 data (summarised in **Table 5** and **Figure 1**), shows that 70 of the 75 flag CPCs (93%) have reported fisheries and biological information: 63 flags with catches (84%); 7 flag CPCs with no fishing activity (9%). No information of any kind was received from 5 flag CPCs (7%) all over the Reporting Period: Gambia, Grenada, Guinea-Bissau, Honduras, and Sierra Leone.

### 1.1 Task 1

The two datasets of Task 1 statistics (T1FC fleet characteristics; T1NC nominal catches) are yearly based global information on a) fishing capacity (using form ST01-T1FC), and b) total catches by species (using form ST02-T1NC), with both forms being mandatory for all CPCs. The Secretariat reminds that for T1NC, the statistical sampling areas are now mandatory (maps: [www.iccat.int/Data/ICCAT\\_maps.pdf](http://www.iccat.int/Data/ICCAT_maps.pdf)). The old Task 1 areas without geographical delimitation still optional.

### *1.1.1 Fleet characteristics (T1FC)*

The information requested in form ST01-T1FC has two sub-forms. Sub-form ST01A is used to compile information by individual vessel. Sub-form ST01B, is used to compile information by groups of vessels, but only for small scale vessels (length overall less than 20 meters) not included in ST01A. Only the fishing vessels actively fishing within a given calendar year should be reported in ST01-T1FC.

The structure of the ST01 form adopted in 2015, allows to collect more complete and detailed information on effective fishing capacity, fleet structure, and optionally yearly based and gear independent nominal fishing effort (fishing days). However, the “optional” condition of reporting the nominal fishing effort (for 2022 data, about half of the flag CPCs reported fishing days) makes it unfeasible to obtain overall effort indicators and compromise possible estimates of total fishing capacity. Having the fishing days for each vessel in both Atlantic and Mediterranean regions would allow to effectively differentiate active from inactive vessels from all the authorised vessels to fish in the ICCAT Convention area in a given calendar year. Hence, the Secretariat reiterates once again the request to make this field mandatory aiming to improve the quality of T1FC data and its potential use in scientific studies.

The T1FC Report Card for 2022 is presented in **Table 1**. For the last nine years (2014 to 2022 data) T1FC has been requested on an individual vessel basis, in agreement with the ICCAT vessel record requirements of the Commission for the 11 vessel authorisation lists, which facilitates the cross-validation process. The Secretariat reminds that this information is also used by the Commission which collects previous year vessel activity under some ICCAT fisheries (E-BFT, tropical species, and M-SWO).

The overall reporting ratio of ST01 for 2022 was 79% (59 flag CPCs) with 3 flag CPCs having late submissions and 9 flag CPCs with corrections to their data that may need future revisions. Sixteen flag CPCs (21%) have not yet reported this information.

The vessel sizes (length overall (LOA)) ranged from 5 to 150 meters in 2022 data, including small scale vessels reported in sub-form ST01B by 13 flag CPCs (about 4,730 vessels). Near 2,330 vessels reported in T1FC were not found in the ICCAT vessel record database (with about 59,500 vessels registered). Some cases could be related to different vessel characteristics being reported in the T1FC and in the ICCAT vessel record. Solving these inconsistencies will require additional work by the Secretariat.

### *1.1.2 Nominal catch (T1NC)*

Task 1 nominal catch data (T1NC) which contains landings and discards (dead and alive) by species, stock, gear, fleet, and year (all in live weight) is a “key” dataset used by ICCAT to accomplish its mandate (in all the stock assessments, MCS and compliance work, etc.). Thus, a complete and timely available T1NC dataset is essential for the work of the SCRS and the Commission. The T1NC compiles (form ST02-T1NC) fishery statistics using two sub-forms. Sub-form ST02A, compiles positive catches (separating landings, dead discards, live discards, and live catches for farming facilities). Sub-form ST02B, compiles a “zero” catch matrix (major species/stock by gear) with positive fishing effort of active gears that have operated within the year. This approach, approved by the Commission ([Res. 15-09](#)), has greatly normalised and simplified the “zero” catch reporting obligation. Only one “zero” is now required per major species/stock and gear combination. The ST02B may require a revision in the future to include and remove additional species/stocks (requested by several flag CPCs).

The T1NC Report Card for 2022 is presented in **Table 2**. It shows the CPCs that have reported both positive catches and “zero” catches (excludes all the SCRS estimates). A summary of the “zero” catches reported by flag CPCs and major species/stock in sub-form ST02B, is presented in **Table 16**. All the T1NC datasets received from 70 flag CPCs (93%), including one flag CPC with late reports, were processed and presented to the SCRS. This includes some datasets corrected by the Secretariat (orange cells, marked for revision) associated to 10 flag CPCs. Five flag CPCs (7%) have not yet reported this information. The total 2022 T1NC nominal catches (~ 877,000 t) reported for all species (discounting the live releases) is about 11% higher when compared with the average of the last five years (2017 to 2021: ~ 794,000 t). Since 2010, the 2021 catches continue to have lowest total catches (about 700,000 t, representing 11% less than the average of 2011-2022 with 785,000 t).

## 1.2 Task 2

Task 2 statistics with catch-effort and size information are more detailed in terms of time (month) and area (1x1, 5x5, or sampling areas), and often reflect a partial coverage associated to the total catches (T1NC). Task 2 information is the main source of data used by the SCRS in stock assessments and the Secretariat for the estimation of important datasets, such as CATDIS (catch distribution), EFFDIS (fishing effort and distribution), CAS, and CAA by species (all used by the SCRS and the Commission). ICCAT CPCs must report three types of Task-2 datasets under their respective electronic forms:

1. T2CE (catch & effort): using form ST03-T2CE
2. T2SZ (size samples): using form ST04-T2SZ
3. T2CS (catch-at-size): using form ST05-T2CS (only for ALB, BFT, BET, YFT, SKJ, SWO)

Or alternatively, any of the special agreed formats agreed by the Secretariat and an ICCAT CPC.

There is also a special form (ST06-T2FM) used to report bluefin tuna caught by purse seiners and transferred to farming facilities in two important events: a) while caging; b) harvested after growing. These compiled datasets can be considered special types of Task-2 size information. However, this information is treated separately (due to the growth at the farms, in the case of (b) events) and used in the stock assessment only after discounting the growth on the farms.

### 1.2.1 Catch and effort

The T2CE Report Card for 2022 is presented in **Table 3**. A total of 56 flags CPCs (75% reporting ratio), including 4 late-reporting flag CPCs and 9 with corrections to their data, have reported T2CE. At least 19 flag CPCs (25%) have not yet properly submitted T2CE statistics for 2022.

All the T2CE information was reported by month and for the most part had the geographical resolution required by the SCRS (1x1 or better for surface fisheries, and 5x5 or better for longline fisheries). The number of datasets reported with the exact geographical location (Latitude/Longitude) continues to increase. The number of species reported in the catches of T2CE datasets has also increased lately (in particular the pelagic shark species). For the most recent years, the trend of reporting more detailed and complete T2CE has continued. Since 2017, the T2CE datasets without effort information are not integrated into the ICCAT-DB system, and explicit requests for revisions are always made by the Secretariat to the corresponding flag CPCs. The Secretariat continues with a T2CE data recovery task, aiming to complete the gaps identified, and to replace “poor” datasets (e.g., datasets without effort, with non-standard gear based effort measures, incomplete species catch composition, low time-area resolution, etc.) whenever possible, using the newer levels of resolution required by the SCRS, such as monthly based datasets, spatial resolution of 1x1 squares for surface gears up to a maximum of 5x5 squares for longline gears. This ongoing task will continue indefinitely, and the Secretariat recommends more active collaboration of CPC scientists and Statistical Correspondents.

An important part of the Secretariat estimates (CATDIS and EFFDIS) depends on the quality of T2CE. However, some deficiencies persist in some datasets reported, the most problematic ones being:

- a) Non-standard fishing effort types for certain gears (e.g., for longline “hooks” is the standard),
- b) Incomplete or partial species catch composition,
- c) “Double” counting of fishing effort, where same fishing effort is being reported several times in different forms for the same gear.

The Secretariat recalls that, as recommended by the SCRS, T2CE statistics should be in all cases reported with the most complete species catch composition. This rule will avoid duplication of the fishing effort for the same fleet/gear/year combination, in cases where each species is reported in individual ST03 forms with incompatible stratifications.

### 1.2.2 Size information

The T2SZ Report Card for 2022 is presented in **Table 4**. This Report Card also contains the datasets of T2CS (catch at size flag CPC estimates, for the six mandatory species) and size information T2SZ. It does not contain the bluefin tuna size samples arriving in form ST06-T2FM, or the bluefin tuna stereoscopic camera measurements. The inclusion of these two datasets into the T2SZ Report Card is performed manually after inventorying and checking all the datasets reported.

A total of 44 flag CPCs (59%), including two late-reporting flag CPCs and 6 with corrections to their data, have reported T2SZ. At least 31 flag CPCs (41%) have not yet submitted in good conditions T2SZ information for 2022.

Since 2017, the SCRS requires that all the T2SZ/T2CS datasets be reported by month, and with the highest geographical stratification possible (1x1, 5x5, 5x10, and 10x10 grids only), maintaining the ICCAT Sampling Areas for biological port sampling. All the size datasets for 2022 arrived by month. The use of smaller geographical grids (1x1, and 5x5) has also increased slightly. The size/weight class bins reported for 2022 have followed the SCRS recommendation on size structures (1, 2, and 5 cm) and weight structures (1 kg). As in years prior to 2022, some errors were identified in the units of the size/weight class bins (e.g., millimetres reported as centimetres) for 2022 T2SZ and T2CS datasets. These datasets were tagged for posterior revisions.

Following the [Res. 11-14](#) on the standardized presentation of scientific information, the SCRS developed the Standard Catalogues on data availability for a period of years, for all the major species and stocks. All the catalogues (28 tables) are presented in **Appendix 1**. These catalogues show the information for a “30 year” period (1993-2022), grouped by flag/gear group combinations, in terms of Task 1 nominal catches (ranked by importance in descending order), and the availability of Task 2 data (catch and effort, size sampling, and catch-at-size) by year. This instrument, which summarises large amounts of information per species/stock, shows the level of data completeness/availability, and the data gaps, for the most important fisheries. The catalogues of **Appendix 1** are provided for the ten major tuna and billfish species and three main sharks stocks only. The catalogues for the main small tuna species, usually prepared for the Small Tunas Species Group intersessional meetings only, were also updated for the SCRS. Following a 2020 recommendation of the SCRS, the Secretariat has publishes since 2021 the two SCRS catalogues on the [ICCAT website](#) at the beginning of following year (with information submitted until the end of the annual meeting of the Commission).

The SCRS scorecard on Task 1/2 data availability is presented in **Table 6**, using the methodology adopted by the SCRS in 2019 (Palma *et al.*, 2019). It has the format adopted by the Working Group on Stock Assessment Methods (WGSAM) (exception: last column with the relative score changes of two consecutive periods of 30 years: 1993-2022 versus 1992-2021) and already contains all the valid 2022 datasets received during the Reporting Period. Two indicators arise from the scorecard results:

- a) A general increase of all the scores as we reduce the time-scale scores from 30 to 10 years-based periods;
- b) Overall, the scores coincide with how the SCRS categorises each species/stock in terms of fisheries data availability (data-poor/data-rich concepts).

If the above indicators are not observed in a given species/stock (e.g., W-SKJ does not follow a), it could mean that the most recent years have seen a deterioration on the provision of Task 2 datasets (T2CE, T2SZ, and T2CS).

### 1.3 Tagging

#### 1.3.1 Electronic tags

The laboratories conducting tagging campaigns with electronic tags (pop-up, archival, etc.) in the Convention area have informed the Secretariat that 270 releases and 121 recoveries were made during the Reporting Period.

During this year, the development of the ICCAT electronic tagging management system (ETAGS) has continued with the main goal of integrating in a centralized relational database all the information obtained from electronics tags including their metadata. Given its complexity (combination of various technologies, large amounts of data to inventory, recover and treat, etc.) this project was planned for at least three phases. Phase one and two have already been terminated. Their main objectives covered, the inventory of tagging data, the creation of the standard files (eTUFF: Electronic Tag Universal File Format) to be loaded into ETAGS, the installation and deployment of ETAGS in a Cloud server (database and application set), the consolidation of the metadata in the standard eTUFF files, and process of loading the ETAGS files into ETAGS.

The first operative version was presented at the Workshop on Atlantic Bluefin Tuna Electronic Tagging, held in July 2023. The presentation consisted of an end-to-end approach to electronic tag management, covering the full life cycle of electronic tags from programming, field deployment, data recovery and analysis to potential physical tag recovery. Additionally, it was also made a practical demonstration of how this information is firstly treated and afterwards imported into ETAGS using representative examples of Wildlife Computer satellite data returns, Lotek and Microwave Telemetry data.

### *1.3.2 Conventional tags*

In relation to conventional tags, several Contracting Parties have reported to ICCAT a total of 5941 releases and 422 recoveries (**Table 7**) during the Reporting Period.

As in previous years, the Secretariat provided conventional tags for tagging experiments to the ICCAT scientific community (individual scientists or research institutions). During the Reporting Period, the Secretariat has distributed 2075 conventional tags, primarily to the tagging projects of the Atlantic-Wide Research Programme for Bluefin Tuna (GBYP) and additionally to various scientific institutions (**Table 8**).

The Secretariat has ongoing several projects such as the conventional tagging work on the database merge process (ICCAT, Atlantic Ocean Tropical tuna Tagging Programme (AOTTP), and GBYP), the integration of pending datasets received by ICCAT (e.g., some USA past submissions mostly with revisions), recovery of the shark species sex information, and other ongoing revisions and quality control on all tagging datasets, all aiming to increase the quality of the conventional tagging information managed by ICCAT. In addition, some dashboards and map viewers have been presented to various intersessional species groups meetings with the aim to examine dynamically and interactively the conventional tagging data.

### *1.3.3 Tagging lottery*

National laboratories award prizes or special gifts to people who recover tags, aiming to encourage and increase the return of recovered tags. In support of the tagging programmes, ICCAT organizes on a yearly basis, a conventional tagging lottery carrying a prize money of €500. In the last ICCAT lottery held on 26 September 2022, prizes were awarded for three tags for each of the following categories: small tunas, sharks, billfishes, temperate tunas and tropicals. The winning tags per category were as follows:

<i>Category</i>	<i>Tag winner</i>	<i>Species</i>	<i>Recovery notes</i>
Small tunas	ATP140363	Wahoo ( <i>Acanthocybium solandri</i> , WAH)	UK, St Helena tagging campaigns
Sharks	377878	Blue shark ( <i>Prionace glauca</i> , BSH)	Spanish tagging campaigns
Billfishes	HM103152	Atlantic white marlin ( <i>Tetrapturus albidus</i> , WHM)	United States tagging campaigns
Temperate tunas	AAB001007	Albacore ( <i>Thunnus alalunga</i> , ALB)	Spanish tagging campaigns
Tropical	ATP154333	Bigeye tuna ( <i>Thunnus obesus</i> , BET)	Spanish tagging campaigns

An additional draw was sponsored by the GBYP with three monetary awards (one with €1,000; two with €500 each) for recoveries of bluefin conventional tuna tags (*Thunnus thynnus*, BFT) only. The winning tags and their rewards were as follows:

- €1000: tag BYP077339, recovered by an Albanian citizen.
- €500: tag BYP061592, recovered by an Italian citizen.
- €500: tag AAB004368, recovered by a Croatian citizen.

## **1.4 Bycatch**

The cumulative information on CPCs observer program design is included in **Appendix 3**. CPCs that reported ST09 data are listed in **Appendix 4**. Data was processed from 29 CPCs (excluding the empty submissions and those still requiring revision).

**Table 9** provides a summary of ST09-DomObPrg data reported for the Reporting Period by discard fate and species group including sharks, sea turtles and seabirds. **Table 10** contains Task 1 nominal catches (T1NC) data for bycatch species for the reporting period.

### *1.4.1 Sharks*

The shark data submitted through forms ST09 (Domestic Observer data) and ST02 (Task 1 nominal catches) in the reporting period are summarized in **Tables 9** and **10**, respectively.

### *1.4.2 Sea turtles*

A summary of sea turtles information submitted for the Reporting Period in ST09 forms is provided in **Table 11**. The Secretariat received much of the bycatch information from submitted ST09-DomObPrg forms.

### *1.4.3 Seabirds*

A summary of the information submitted on ST09 forms for seabirds is provided in **Table 12**.

### *1.4.4 Marine mammals*

A summary of the information submitted on ST09 for marine mammals is provided in **Table 13**.

## **2. Data recovery and improvement**

### **2.1 Revisions and updates**

By default, historical revisions cover the years not covered by the SCRS “3 +1 revision rule”, where the last three years already reported officially to ICCAT plus the new year, are considered preliminary data and can be freely revised by CPCs (i.e., 2019 to 2021 plus 2022). All years before 2019 require a scientific document explaining the revision.

Several CPCs have submitted historical revisions to T1NC for tuna and tuna-like species, sharks and other bycatch species. Part of those revisions (ALB, SAI, BSH, and small tuna species) were made during the 2023 ICCAT intersessional data preparatory meetings. Some gaps were also completed and a few series with unclassified gears were also discriminated. Many CPC scientists were involved with the Secretariat in these revisions. This joint effort has contributed to the T1NC improvements of these species, and this type of joint work should be recommended to the other ICCAT species groups. All the T1NC updates, containing all the revisions (majorly with the supporting SCRS documents) and already adopted/used by the respective species group, are summarised in **Table 14**.

There are however, some official T1NC datasets reported (**Table 15**) for years between 2017 and 2021, some without a scientific document that, are pending to be included in T1NC. These catch series required a SCRS decision. For the period 2017-2019, Mauritania has reported exactly the same catch details (species, gear and area) as in the past. Therefore, this catch series were discarded by the SCRS without any impact. For the Ghanaian purse seine catches of 2021, the situation is more problematic. These amounts are related to vessels with trips overlapping years 2021 and 2022, and therefore cannot be allocated (summed up) to any of the years. These partial catches (BET, YFT, SKJ, and TUN unclassified which contains the “faux poisson” component of Ghana PS catches) should use the date of the set to identify the calendar year and lately added to the respective year. This reiterative erroneous T1NC provision (happening in the last decade) must be verified and corrected accordingly with the help of the Ghana Statistical correspondents, including the estimation of “faux poisson” catch component series.

In the follow-up of a 2018 Commission first request (followed by several recommendations on tropical species, the latest being [Rec. 22-01](#) to include in the T2CE datasets of the PS tropical fleets reported to ICCAT the effort unit “number of sets” per fishing mode (FAD/free school), which includes revisions to the existing T2CE datasets back to 1991 (maximum, and at least the last six years, by [Rec. 22-01](#)), some improvements were made. Belize (2017 to 2022), EU-España (2013 to 2022), Curaçao, El Salvador and Panama (2016 to 2022), and Senegal (2015-2022) have already updated their T2CE datasets with this Commission requirement (still pending some verifications). **Table 17** presents the historical T2CE datasets updated and adopted by the respective species groups (already integrated into the ICCAT DB) together with some remarks on the status.

The Secretariat has also received some important historical revisions of T2SZ. **Table 18** presents the historical T2SZ dataset recoveries reported and adopted by the respective species groups (already integrated into the ICCAT-DB).

## 2.2 Additional by-catch information

The seabird mitigation measures, compiled in the past using forms CP44 and ST011, are now integrated in the new ST09 form. The use of seabird mitigation measures was reported by 31 CPCs on ST09 forms in the reporting period.

## 3. ICCAT databases

The ICCAT database information system (ICCAT-DB) is a relational database management system (RDBMS servers: MS-SQL 2016 as the main server; MariaDB 10.4 for the IOMS system; PostgreSQL 13.4 for tagging) with about 50 databases built to manage all the structured information received by the Secretariat (with some in heave development). It has various frontend/backend tools including client applications developed mostly with Java technologies, SQL scripts, and some VBA tools (to be deprecated by the new applications under development). These tools are used to interact with the information (validation, transformation, processing, statistical analysis, data mining, standard outputs, etc.) and for data dissemination (web, ICCAT publications, meetings data provision, etc.).

In addition to the statistical and scientific information managed, ICCAT-DB also manages a large portion of the information associated with the Commission’s compliance requirements. Since 2009, the workload of compliance-related information, mainly in response to the increase of regulatory measures has steadily increased the database management and related tasks (control, verification quality assurance, storage and backups, etc.).

The Secretariat has under continuous development the ICCAT Integrated Online Management System (IOMS), aimed at managing online all the ICCAT data requirements. It is a long-term project intended to replace entirely the current ICCAT data reporting and management system (ICCAT-DB). Three senior software developer experts (two within the ICCAT staff, and a third financed by the European Union complementary contribution) are working full time on the IOMS project. A new senior back-end developer is in the process of being hired for one year (also financed by the European Union). This project is under the supervision (and partial contribution to the development) of the Statistics Department of the Secretariat. The European Union has always supported the IOMS with annual voluntary contributions (e.g., Grant No. SI2.839494 with €100,000 in 2021/2022; Grant No. 101058273 with €100,000 in 2022/2023). For the annual period 2023/2024, two additional grants were financed by the European Union (Grant No. 101132335 with €100,000 and Grant No. 101132360) specifically to handle the complexity of the IOMS Vessel Manager module and all their components (including the UN/FLUX integration). Details about the IOMS project area described in the [Report of the 2023 Meeting of the Online Reporting Technology Working Group \(WG-ORT\)](#). At the 2023 Intersessional Meeting of the WG-ORT, the WG-ORT acknowledged the outcome of the first two experimental years (2021 and 2022) with great improvements observed in the level of effective utilization by the ICCAT CPCs and their IOMS users in providing online some sections of their Annual Reports. In 2022, the Commission adopted the [Rec. 22-17](#), which requires that CPCs submit Part I / Annex 1 and Part II / Section 3 of the 2023 Annual Report directly into IOMS beginning in 2023, and also to use the IOMS to submit additional reporting information in the future as new modules are developed and enter into production. The Secretariat will continue to support the ICCAT CPC officers (as in 2021 and 2022) in the completion of the 2023 Annual Reports.

In 2021 and 2022 the Secretariat refined the databases to store information related to tropical support vessels, FAD deployments, and port sampling for tropical tunas, reported using forms ST07, ST08 and ST09, respectively. It has ongoing the redesign of four additional databases (Task 1, Task 2, Vessels, and, Tagging) aimed to be integrated into the IOMS project. The full ICCAT-DB documentation, composed of several parts (database reference manuals, user guides, "javadoc" for JAVA tools documentation, special articles, etc.) has been undergoing a merging process with the documentation related to IOMS implementation (standard manuals content to be managed by the IOMS dynamic Help System, already working under the IOMS). Both will be very similar databases, which will allow the elimination of redundant documentation. This ongoing work is being continuously merged and updated in parallel with the improvements made to the ICCAT-DB and the progress of the IOMS.

The exceptional circumstances of 2020, 2021 and the overloaded calendar of 2022 and 2023 obliged the Secretariat to delay or postpone several projects. The most important ones were: the replacement of the stand-alone MS-ACCESS databases with Task 2 data (T2CE: "t2ce.mdb", T2SZ/CS: "t2sz.mdb") by SQLite databases; the "ICCAT forms" online Task 1/2 validation prototype; delay of the GIS project (aimed at geo-reference all the pertinent datasets in ICCAT-DB, and to create a "marine-rich" PostGIS server); delays on the conventional/electronic tagging work (database redesign, automatic data integration tools, sex recoveries by individuals, etc.) and on the new "Biological Sampling" database aimed to handle all the large spectrum of biological data (ageing, maturity, stomach content, hard parts, etc.) obtained under ICCAT financed projects. The Secretariat has planned (see section 11) to continue with all these projects in the future.

Two of the above delayed projects have already started in 2021 and are now under heavy development. The first one is the ETAGS database system aimed to manage all the ICCAT electronic tagging information (data and metadata) for which several applications and analytical tools were planned (details in section 1.3). The second one, is the new "Biological Sampling" database (BIOSAMP) aimed to handle all the large spectrum of biological data (ageing, maturity, stomach content, hard parts, etc.) obtained under ICCAT financed projects. Several ICCAT datasets with this type of information obtained from various ICCAT research programmes (GBYP, AOTTP, SMTYP, SWOYP, etc.) are now being compiled, cleaned and afterwards normalized (transformed in harmonized structures with ICCAT existing or new codes) to be used in the design of the relational database model. This project, planned for the mid/long term, will be carried out fully in-house and will evolve depending on the time availability of the Secretariat database experts.

### **3.1 Statistics**

#### *3.1.1 Task 1 and Task 2*

All the electronic forms used to collect Task 1 data (ST01-T1FC and ST01-T1NC), Task 2 data (ST03-T2CE, ST04-T2SZ, ST05-CAS and ST06-T2FM), and Task 3 data (ST07-TropSupVes, ST08-FadsDep, ST09-DomObPrg, and ST10-PortSamp) were updated to version "2023a" to incorporate the required changes of the SCRS (codes, structures, filtering criteria, etc.). The respective databases were updated accordingly. The Secretariat completed the automatic data integration of the information received in all ST type forms, and improved the automation processes to handle Task 1, Task 2 and Task 3 forms. The Secretariat is also working to develop similar automatic data integration tools for the conventional tagging forms TG01, TG02, and TG03. Extending this automatic integration framework for all the "ST" and "TG" forms will occur progressively (2023 and beyond) due to its complexity.

#### *3.1.2 Catch distribution (CATDIS)*

The CATDIS (catch distribution: estimation of T1NC for the nine major tuna and tuna like species of ICCAT, stratified by year, flag, fleet, gear, fishing mode, catch type, trimester, and 5x5 degree squares) is one of the most used ICCAT catch estimates, with a particular focus on the latest stock assessments of ICCAT using integrated stock synthesis models (SS3, Maunder and Punt, 2013). The Secretariat has updated the CATDIS from 1950 to 2021 with the most recent statistical information available. The newly CATDIS estimations were published on the ICCAT website on 31 January 2023 (reflecting in detail the T1NC catches also published in the same date). The CATDIS was used in the majority of the 2023 intersessional SCRS meetings. Vol. 48 of the Statistical Bulletin was also updated with the most recent CATDIS (maps) estimates of the period 1950-2021.

At the end of 2023, the Secretariat has planned to update the CATDIS for the period 1950-2022 with the latest T1NC and T2CE datasets, which will be adopted by the SCRS and the Commission during their 2023 annual meetings and publish it in January 2024 (Web and Statistical Bulletin Vol. 49). This approach had greatly benefited the 2022 and 2023 intersessional work of the species groups and the SCRS, and the same is expected for 2024 intersessional work.

Once again, the CATDIS has not included the estimates of four additional species: spearfish (SPF), blue shark (BSH), shortfin mako (SMA) and porbeagle (POR), due to the lack of sufficient information in T2CE for these four species (**Appendix 1**). However, some progress has been made on some data recoveries (e.g., the T2CE LL series of USA complemented now with sharks in the species catch composition), and new attempts should be made in the near future. The Secretariat intends to make an additional attempt to try to obtain the CATDIS for these three species using both Task 2 datasets (T2CE and T2SZ) of these three species. It is also working to improve further the CATDIS by separating the catch components (landings, and dead discards), and the trimesters into monthly estimations (work in progress).

### 3.1.3 Catch at size/Catch at age

The catch-at-size (CAS) database is complete and functional, with an active connection between the size data (both types: T2SZ and T2CS) and the substitution tables used for the CAS estimates. CAS and catch-at-age (CAA) estimations were usually made for six major species (ALB, BFT, BET, YFT, SKJ, and SWO). During 2023, no new estimations of CAS were made by the Secretariat once they were not required by the SCRS species groups during the 2023 intersessional work. Only Panel 1 (in the second 2023 session) requested the latest BET CAS estimation (made in 2021 for the BET stock assessment and covering the period 1975-2019) to study some purse seine moratoria scenarios. It is unclear whether these estimations of CAS and CAA will be required in the future.

### 3.1.4 FAD forms

In 2014, an electronic form (ST08-FadsDep) was created to collect information on the number of FADs deployed according to [Rec. 13-01](#). This form has been revised several times and in 2018 the SCRS approved a new version addressing the main concerns raised by CPCs. In addition to the information provided on the ST08 forms, CPCs are also requested to submit FAD Management Plans according to [Rec. 16-01](#), [Rec. 19-02](#) and [Rec. 22-01](#). Countries fishing for tropical tunas that have submitted information about their FAD fisheries and their FAD Management Plans, as well the ST08-FADsDep data for 2022 during the Reporting Period are summarized in **Appendix 2**. Associated with the tropical tunas purse seine fisheries, the ST07 form collected the information related to support vessels. **Appendix 5** shows a summary of the number of support vessels as reported by CPCs from 2010 to 2022.

### 3.2 FAD management plans

The [Rec. 22-01](#) requires that each year by 31 January, CPCs with purse seine and baitboat vessels fishing for bigeye, yellowfin, and skipjack tunas in association with objects that could affect fish aggregation, including FADs, shall submit Management Plans to the Executive Secretary for the use of such aggregating devices by vessels flying their flag as well as information on FADs deployed and utilization during the previous year (ST08-FADsDep). The elaboration of the plan in [Rec. 22-01](#) Annex 6 provides an extensive list of criteria that must be included in the Plan.

In 2023, 18 CPCs provided Tropical tuna fishing management plans, of which 10 also provided FAD management plans (**Appendix 2, Table 1**). ST08-FadsDep forms were received from 18 CPCs. Of these, nine reported not using or deploying FADs. Following the request from the 2021 Commission Panel 1 intersessional meeting, historical data on FADs deployments were provided during the Reporting Period by 1 CPC with 2021 data using the ST08 eform (**Appendix 2, Table 2**).

#### 4. Work in support of the SCRS Intersessional Meetings

One of the main tasks of the Secretariat is to provide full support for all intersessional and annual meetings of the SCRS, including provision of the fisheries statistic data (Tasks 1, 2 and 3) and auxiliary data as requested by the working groups. The Secretariat also provides scientific support in collaboration with scientists and modelers on all the assessment methods, normally following an intersessional work plan approved by the subcommittees, species groups and/or working groups. During the meetings the Secretariat also compiles and ensures the integration of results, creating Status and Kobe plots, projections, auxiliary analysis and the backup of all analyses and main results in support of the management advice provided by the SCRS. Finally, in collaboration with Rapporteurs, the Secretariat provides support for research workplans, calls for tenders and other activities with the aim of making the best use of the available funds for science and data collection.

Since the last provision of advice by the SCRS in September 2022, the Secretariat provided support to a total 31 SCRS and Commission/SCRS online and in-person meetings.

In addition to the support provided to working groups and subcommittees, the Secretariat also produced a total of 22 SCRS documents and 7 presentations. The list of these documents is compiled in **Appendix 6**.

#### 5. Publications

##### 5.1 ICCAT series of periodic publications

For the current year, the Secretariat has continued the series of periodic publications developed throughout the history of ICCAT. **Table 19** shows the volumes of these series that were published in 2023. Due to the request from the Commission to reduce costs, since 2017 all ICCAT periodic publications are only published in electronic format and are all available for download on the ICCAT publications webpage.

All volumes of the Biennial Report have been published, including Volume 4 which was published for the first time in 2011, and which contains the reports issued by the Secretariat for the SCRS and the Commission, i.e. the Secretariat Report on Statistics and Coordination of Research, the Financial and Administrative Reports, and the ICCAT Secretariat Reports to the Conservation and Management Measures Compliance Committee (COC) and the Permanent Working Group for the Improvement of ICCAT Statistics and Conservation Measures (PWG).

Volume 48 of the Statistical Bulletin was published on 29 March 2023 as an electronic version. The current edition provides the catches and other statistics series for the period 1950 to 2022.

Given the Secretariat's workload and the request to reduce the publication time of the ICCAT Collective Volume of Scientific Papers and considering that a significant number of authors do not follow the publication guidelines provided, the SCRS agreed in 2014 that those papers not meeting the minimum standards would not be published. As a result, since 2017 the list of unpublished papers in the volume includes those withdrawn by the authors and those which failed to meet the minimum established publication standards. The Secretariat also adopted the necessary measures in 2017 to ensure that documents are published in electronic format soon after subcommittee and species group and working group meetings. As a result of these changes in the publication process, in late 2022 the Secretariat completed the publication of volume 79 (completed issues 1 to 6) and has already published most documents contained in issues 1 to 10 of volume 80 of the ICCAT Collective Volume of Scientific Papers.

##### 5.2 ICCAT Manual

Following the requests regarding the update and expansion of Chapter 2 of the ICCAT Manual, in 2021 the Secretariat hired experts to revise the current chapters for the following small tunas and shark species: bonito (*Sarda sarda*), bullet tuna (*Auxis rochei*), frigate tuna (*A. thazard*), king mackerel (*Scomberomorus cavalla*), little tunny (*Euthynnus alletteratus*), Spanish mackerel (*Scomberomorus maculatus*), blackfin tuna (*Thunnus atlanticus*), blue shark (*Prionace glauca*), shortfin mako (*Isurus oxyrinchus*), porbeagle (*Lamna nasus*), common thresher (*Alopias vulpinus*), bigeye thresher (*Alopias superciliosus*), oceanic whitetip (*Carcharhinus longimanus*), scalloped hammerhead (*Sphyrna lewini*), smooth hammerhead (*S. zygaena*) and great hammerhead (*S. mokarran*).

In addition, in 2021 new species chapters were prepared for the following small tunas and shark species: wahoo (*Acanthocybium solandri*), serra Spanish mackerel (*S. brasiliensis*), cero (*S. regalis*), plain bonito (*Orcynopsis unicolor*), silky shark (*C. falciformis*), longfin mako (*I. paucus*), crocodile shark (*Pseudocarcharias kamoharai*) and pelagic stingray (*Pteroplatytrygon violacea*). A new chapter for narrow-barred Spanish mackerel (*Scomberomorus commerson*) has been produced in 2022.

These chapters were revised and translated by the Secretariat in 2022. In addition, these chapters were reviewed by SCRS experts and adopted during the SCRS in 2022. Final revisions to the sub-chapters have now been completed and published on the [ICCAT website](#) throughout 2023.

### 5.3 ICCAT website

The ICCAT website, in the three official languages of the Commission, continues to be updated on a regular basis to provide better service to users.

Integration into the database of the latest SCRS documents published on our webpage has been completed so that they can be located through the search engine of the ICCAT Collective Volume of Scientific Papers from 1973, using different parameters and criteria.

In collaboration with the IT service, web-based tools continue to be implemented and improved to mitigate vulnerabilities and threats to the ICCAT website.

One of the major tasks associated with the ICCAT website aims at the automatic and dynamic use of data from the IOMS system (details in point 3 of this report) using the IOMS public web services. This is a very long-term task (to be done in line with the progress of IOMS) and will be done in collaboration with the Department of Statistics. This year, initial work has started, consisting of experimental development (testing of various techniques and technologies) of web modules for consulting and extracting data directly from the IOMS public application programming interfaces (APIs) for automatic, real-time publication on the ICCAT website.

Several changes have been made to the source code of our website so that the information required by the user is displayed more efficiently, such as requests for information through our databases. New ways of viewing Task 1 data with dashboard tools or cartographic viewers have also been published, and others are being finalised others to represent conventional and electronic tagging data by species.

The necessary aesthetic remodelling of our website has continued. This top priority project aims to adapt the ICCAT website to the new needs and compatibility requirements of the new web search engines, to provide better service to ICCAT users.

## 6. ICCAT Scientific programmes

The activities of the Atlantic-Wide Bluefin Research Programme (GBYP), Small Tunas Year Programme (SMTYP), the Shark Research and Data Collection Programme (SRDCP), the Enhanced Programme for Billfish Research (EPBR), Albacore Year Programme (ALBYP) and Swordfish Year Programme (SWOYP) are presented separately in reports to the SCRS (see section 11 and Appendices 6 to 11 of the 2023 SCRS report).

The Secretariat's participation in these programmes mainly consists of administrative and scientific support. In the administrative area, the Secretariat assists with coordination of research proposals, calls for tenders/Quotation requests, and funds administration, and oversees the auditory and accounting responsibilities of these programmes. As regards scientific support, the Secretariat plays a major role in liaising between the SCRS and the programme coordinators on the design of research proposals, calls for tenders, evaluation of proposals, coordination of research and database management, as well as IT support for each of the programmes. As in the past, during 2023 the Secretariat actively participated in several of the research programmes components.

## 7. SCRS research activities funded

1. Short-term contract extension for AOTTP awareness and tag recovery activities in Senegal;
2. Short-term contract for AOTTP awareness and tag recovery activities in Senegal;
3. Short-term contract extension for AOTTP awareness and tag recovery activities in Côte d'Ivoire;
4. Short-term contract for AOTTP awareness and tag recovery activities in Côte d'Ivoire;
5. Short-term contract for tagging activities in the North-West Atlantic following the closure of the Atlantic Ocean Tropical Tunas Tagging Programme (AOTTP);
6. Short-term contract for development of the western Atlantic skipjack management strategy evaluation;
7. Short-term contract for further development of the multi-stocks tropical tunas;
8. Short-term contract for investigation into bycatch estimation methodologies;
9. Short-term contract for ICCAT SMTYP for the biological samples collection for growth, maturity and genetics studies;
10. Short-term contract extension for collection of biological samples for growth study on billfish in the eastern Atlantic;
11. Short-term contract extension for ICCAT swordfish for growth, reproduction and genetics studies: biological samples collection and analysis;
12. Short-term contract extension for modelling approaches: support for the ICCAT North Atlantic swordfish MSE process;
13. Short-term contract extension for ICCAT North Atlantic albacore tuna reproductive biology study;
14. Short-term contract extension for ICCAT South Atlantic albacore tuna reproductive biology study;
15. Short-term contract for improvement of the North Atlantic albacore management strategy evaluation (MSE) framework: stock synthesis reference case;
16. Electronic PSAT tagging of Atlantic swordfish, Atlantic albacore, Atlantic pelagic sharks and Northern-eastern Atlantic billfishes;
17. Short-term contract for mitogenomics and nuclear-genome-wide single-nucleotide polymorphism genotyping to resolve the genetic population structure of Atlantic shortfin mako (*Isurus oxyrinchus*) and preliminary analysis of genetic population structure of Atlantic porbeagle (*Lamna nasus*);
18. Short-term contract for studying the genetic population structure of Atlantic porbeagle (*Lamna nasus*) by using nuclear-genome-wide single-nucleotide polymorphism genotyping;
19. Short-term contract for work supporting a quasi-quantitative risk assessment approach;
20. Short-term contract for the improvement of the North Atlantic albacore management strategy evaluation (MSE) framework;
21. Short-Term contract for modelling approaches: Support to Bluefin Tuna Stock Assessment (ICCAT GBYP 08/2022) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
22. Short-Term Contract for biological sampling of adults in farms (ICCAT GBYP 09/2022-B) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
23. Short-Term Contract for biological sampling and analysis (ICCAT GBYP 08/2022 of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
24. Short-Term Contract for development of the ICCAT electronic tags management system (ICCAT GBYP 11/2022) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
25. Short-Term Contract for biological sampling of adults in farms (ICCAT GBYP 09/2022-A) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
26. Short-Term Contract for GBYP Steering Committee external member (ICCAT GBYP 10/2022 of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
27. Short-Term Contract for GBYP aerial surveys data analyses (ICCAT GBYP 12/2022) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
28. Short-Term Contract for Modelling Approaches: Support to Bluefin Tuna Stock Assessment (ICCAT GBYP 03/2023) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
29. Short-Term Contract for Advice on the Close-Kin Mark-Recapture Workshop (ICCAT GBYP 01/2023) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);
30. Short-Term Contract for Pilot Study on Epigenetic Ageing Technique for Age Estimation of Atlantic Bluefin Tuna (ICCAT GBYP 02/2023) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 12);

31. Short-Term Contract (ICCAT GBYP 03/2023) for the Aerial Survey for the Monitoring of Bluefin Spawning Aggregations in the Mediterranean Sea (Area A) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 13);
32. Short-Term Contract (ICCAT GBYP 03/2023-B) for the aerial survey for the monitoring of bluefin spawning aggregations in the Mediterranean Sea (Areas C and E) of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 13);
33. Short-Term Contract for biological sampling and analysis (ICCAT GBYP 02/2023 of the Atlantic-Wide Research Programme for Bluefin Tuna (ICCAT GBYP Phase 13);
34. Short-term contract for continuation of the work supporting a quasi-quantitative risk assessment approach.

## 8. Major statistical and IT tasks planned for 2023

The Secretariat has been working since 2017 on the ICCAT Integrated Online Management System (IOMS). After being adopted by the SCRS and the Commission, the Commission's Online Reporting Technical Working Group (WG-ORT) has overseen the specifications and the governance of all the development process. The last [Meeting of the Online Reporting Technology Working Group \(WG-ORT\)](#) held in February 2023 delineated the content of the future work to be presented at the 2023 Commission meeting for revision and approval. The IOMS has been in production since 1 August 2021 (experimental year) and is currently managing the Annual Reports of the ICCAT CPCs. The IOMS is a crucial long-term ICCAT project that requires the full involvement/commitment of the Secretariat.

Additionally, the following tasks represent continuous database improvements and maintenance that will continue throughout 2023 and beyond. The major priority tasks for 2022/2024 include:

- Upgrade all the ICCAT-DB system from MS-SQL server 2016 to MS-SQL server 2022;
- Replace the stand-alone MS-ACCESS Task 2 databases on the web by SQLite equivalent ones;
- Improve the "client applications" that manage the databases of the ICCAT-DB system;
- Continue the development of the statistical/tagging dashboards (dynamic querying);
- Continue the tagging database development for both conventional and electronic tagging;
- Continue the Biological Sampling database development (includes data recovery/integration);
- Continue the standardization of the electronic forms (TG: tagging forms, CP: compliance forms);
- Extend the automatic data integration tools for the standardized electronic forms;
- Continue the development of the geographic information system (GIS) project (create a PostGIS server and geo-reference all the pertinent ICCAT data available in ICCAT-DB);
- Continue the adaptation/migration of all the 50 databases of the ICCAT-DB system to the new ICCAT IOMS system.

Table 1. Task 1 fleet characteristics (form ST01-T1FC) submission status for 2022 data sent to ICCAT during the Reporting Period ("green": before deadline; "yellow": after deadline; "orange": has not passed Filter 1 (scenario 2); "blank": not reported or no active fleets).

Tableau 1. Situation de la soumission des caractéristiques des flottilles de la tâche 1 (formulaire ST01-T1FC) pour les données de 2022 envoyées à l'ICCAT pendant la période de déclaration ("vert" : avant la date limite ; "jaune" : après la date limite; "orange" : n'a pas passé le Filtre 1 (scénario 2) ; "cellule vide" : non déclarées ou pas de flottilles actives).

Tabla 1. Estado de la presentación de características de la flota de Tarea 1 (formulario ST01-T1FC) para los datos de 2022 enviado a ICCAT durante el periodo de comunicación ("verde": dentro del plazo; "amarillo": fuera de plazo; "naranja": no pasó el Filtro 1 (escenario 2); "en blanco": no se han enviado datos o no hay flotas activas).

Table 7. Summary of the total number of conventional tags by flag (released and/or recovered, covering all ICCAT species) reported to ICCAT during the Reporting Period. The figures shown include data received directly by ICCAT, as well as those provided by the GBYP and AOTTP projects.

Tableau 7. Résumé du nombre total de marques conventionnelles par pavillon (apposées et/ou récupérées, couvrant toutes les espèces de l'ICCAT) déclarées à l'ICCAT au cours de la période de déclaration. Les chiffres indiqués incluent les données reçues directement par l'ICCAT ainsi que les données fournies par les projets GBYP et AOTTP.

Tabla 7. Resumen de número marcas convencionales por pabellón (colocadas y/o recuperadas, para todas las especies de ICCAT) comunicadas a ICCAT durante el periodo de comunicación. Las cifras mostradas incluyen los datos recibidos directamente por ICCAT, así como los aportados por los proyectos GBYP y AOTTP.

## APPENDIX 1 /Appendice 1 / Apéndice 1

**Appendix 1.** Standard SCRS catalogues on statistics (Task 1 and Task 2) of the 13 major ICCAT species (10 tuna & tuna like species and 3 shark species) by stock, major fishery (flag/gear combinations ranked by order of importance) and year (1993 to 2022). Only the most important fisheries (representing ±97.5% of Task-I total catch) are shown. For each data series, Task I (DSet= "t1", in t) is visualised against its equivalent Task II availability (DSet= "t2") scheme. The Task-II colour scheme, has a concatenation of characters ("a"= T2CE exists; "b"= T2SZ exists; "c"= T2CS exists) that represents the Task-II data availability in the ICCAT-DB. See the legend for the colour scheme pattern definitions.

**Appendice 1.** Catalogues standard du SCRS sur les statistiques (Tâche 1 et Tâche 2) des 13 espèces principales de l'ICCAT (10 espèces de thonidés et espèces apparentées et 3 espèces de requins) par stock, pêcherie principale (combinatoires pavillon-engin classées par ordre d'importance) et année (1993 à 2022). Seules les pêcheries les plus importantes (représentant ±97,5% de la prise de Tâche I) sont présentées. Chaque série de données de la Tâche I (DSet= "t1", en tonnes) est représentée par rapport au schéma de disponibilité équivalent de la Tâche II (DSet= "t2"). Le schéma de couleurs de Tâche II présente une concaténation de caractères ("a"= T2CE existe; "b"= T2SZ existe; "c"= T2CS existe) qui représente la disponibilité des données de Tâche II dans la base de données de l'ICCAT. Veuillez vous reporter aux légendes pour les définitions du schéma de couleurs.

**Apéndice 1.** Catálogos estándar del SCRS sobre estadísticas (Tarea 1 y Tarea 2) de las 13 especies principales de ICCAT (10 especies de túnidos y especies afines y 3 especies de tiburones) por stock, pesquería principal (combinaciones arte/pabellón clasificadas por orden de importancia) y año (1993 a 2022). Solo se muestran las pesquerías más importantes (que representan ±97,5% de la captura total de Tarea I). Cada serie de datos de Tarea I(DSet= "t1", en t) se visualiza con respecto a su esquema equivalente de disponibilidad de Tarea II (DSet= "t2") . En el esquema de colores de Tarea II, se incluye una concatenación de caracteres ("a"= T2CE existe; "b"= T2SZ existe; "c"= T2CS existe) que representa la disponibilidad de datos de Tarea II en la base de datos de ICCAT. Véase la leyenda para las definiciones del patrón del esquema de colores.
